Sanskar Jain

Backend Software Engineer | C#/.NET | AWS | Microservices
Hyderabad, Telangana, India | +91 90216 20156 | sanskarjain0901@gmail.com | linkedin.com/in/sanskar-jain0901

Professional Summary

Backend Software Engineer with **2+ years** building cloud-native REST APIs and distributed systems at Verisk Analytics using **C#**, **.NET 8**, **ASP.NET Core**, and **AWS**. Cut latency by **83%**, serve **200K+ weekly API requests**, and halved deployment time, owning work end-to-end from technical design through production support in **Agile/Scrum** teams.

Technical Skills

Languages: C#, Java, Python, TypeScript, JavaScript, SQL
Backend: .NET 8, ASP.NET Core, .NET Framework, ASP.NET MVC, Web API 2, Spring Boot, Spring Security, JPA/Hibernate, REST APIs, Microservices, CQRS, Event-Driven Architecture, Multi-Tenant SaaS
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, ECS, Lambda, ElastiCache), Docker, Kubernetes, Terraform, CI/CD, Azure DevOps Pipelines, Render, Maven
Security & Identity: OAuth 2.0, OpenID Connect (OIDC), JWT, Okta, Kong API Gateway, RBAC, Session Management, Token Revocation, Webhooks
Data & Messaging: MongoDB, PostgreSQL, MySQL, Elasticsearch, Redis, Apache Kafka, Schema Design, Indexing, Query Optimization, Database Migrations
Frontend & Tools: React 18, TypeScript, Vite, TailwindCSS, Git, Swagger/OpenAPI, Jira, Agile/Scrum, xUnit, NUnit, AI-Assisted Development (Claude Code, OpenAI API)

Professional Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Co-designed **RulesRunner**, a stateless microservice using **CQRS** and **AWS SQS** that offloaded compliance checks from the client, reducing wait time from **3000ms to 500ms (83% improvement)** while enabling horizontal scaling.
- Architected fault-tolerant **event-driven** pipelines with idempotent processing, retry/backoff strategies, and **AWS Lambda** consumers, sustaining **500+ production messages daily** with zero message loss under failure conditions.
- Engineered a scalable backend for **Xactimate's** import/export of **30+ data types** using asynchronous processing, **Amazon S3** presigned URLs, and **MongoDB**, reducing transfer time by **38%** and customer-reported issues by **25%**.
- Built **ASP.NET Core** REST APIs serving **200K+ weekly requests** with structured error handling, **Swagger/OpenAPI** documentation, and **URL-based versioning** across **16 v2 endpoints** for backward-compatible client migration.
- Established **OAuth 2.0** authentication on **AWS EKS** behind **Kong API Gateway** for **6 of 15+ platform services**, integrating **Okta**-issued **JWT** tokens with the existing Identity Server flow.
- Secured true single sign-out across **4 client applications** by migrating legacy **Forms Authentication** to **JWT bearer authentication** over a centralized **Redis** session store, pairing a **JTI** blocklist with server-side session invalidation to cut the post-logout replay window from **7 days** to **under 1 second**, with **Okta Event Hooks** propagating provider-initiated logout across **4 tenants**.
- Improved API response time by **34%** through **Redis**/**Amazon ElastiCache** caching, connection pooling, and **MongoDB**/**PostgreSQL** indexing tuned from slow-query analysis.
- Slashed deployment time by **50%** and build cycles by **33%** overhauling **Azure DevOps** CI/CD pipelines, and cut technical debt by **55%** while improving runtime performance by **30%** migrating legacy **.NET Framework** services (**ASP.NET MVC**, **Web API 2**) to **.NET 8**.
- Developed an internal **workflow automation agent** on the **OpenAI API** auto-routing **30–50 Jira tickets per week**, and maintained **90% code coverage** with **xUnit**/**NUnit** alongside structured **code reviews**.

Projects

Attendance & Payroll SaaS – Multi-Tenant Production Platform Jul 2026 – Present
Live: sanskar-engineers-payroll-ui.onrender.com

- Shipped a multi-tenant attendance and payroll **SaaS** to production, now serving **15+ client organizations**, built end-to-end as sole engineer on **Spring Boot 4** (**Java 17**), **React 18** + **TypeScript**, and **PostgreSQL**.
- Enforced tenant isolation via a shared-schema `org_id` discriminator with **Hibernate** filters and query-level scoping, secured the API with **Spring Security**, **JWT**, and **RBAC** across **3 roles**, and deployed the **Docker**-containerized stack to **Render** with managed **PostgreSQL** on **Supabase**.

Certifications & Education

AWS Certified Cloud Practitioner – Amazon Web Services Oct 2024
B.Tech in Computer Engineering, Vishwakarma Institute of Technology, Pune 2020 – 2024 | CGPA: 8.8/10
