Summary

Backend engineer with 2+ years of experience building cloud-native APIs and distributed systems at Verisk Analytics. Core expertise in designing scalable microservices, async event-driven pipelines, and high-throughput REST APIs using **C#/.NET 8** and **AWS**. Reduced latency by 83%, improved reliability, and shipped production systems end-to-end with strong ownership in Agile teams.

Skills

Languages: C#, Java, Python
Backend: .NET 8, ASP.NET Core, Spring Boot, REST APIs, Microservices, Kafka, Redis, CQRS, API Versioning
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, ECS, Lambda, ElastiCache), Docker, Kubernetes, Terraform, CI/CD
Security: OAuth 2.0, JWT, Okta, Kong Gateway
Databases: MongoDB, PostgreSQL, MySQL, Indexing, Query Optimization
Testing & Tools: xUnit, NUnit, Azure DevOps, Swagger/OpenAPI, Splunk, OpenTelemetry, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Co-designed **RulesRunner**, a stateless microservice using **CQRS** and **SQS** that offloaded compliance checks from the client, reducing wait time from **3000ms to 500ms (83%)** while enabling horizontal scaling.
- Authored technical design documentation defining service boundaries, API contracts, DLQ handling, and **SNS**-based event publishing patterns for distributed consumers.
- Architected event-driven architecture with idempotent processing, retry/backoff strategies, and **AWS Lambda** pipelines ensuring zero message loss under failure conditions.
- Engineered scalable backend for **Xactimate's** import/export of **30+ data types** using async processing, **S3 presigned URLs**, and **MongoDB**, reducing transfer time by **38%** and issues by **25%**.
- Built **ASP.NET Core** REST APIs handling **200K+ weekly requests** with structured error handling, input validation, and **Swagger/OpenAPI** documentation.
- Implemented **URL-based API versioning** to ensure backward compatibility and support seamless client migrations across service versions.
- Established **OAuth 2.0** authentication on **AWS EKS** behind **Kong Gateway**, integrating **Okta JWT tokens** with existing Identity Server flow for secure cross-service authorization.
- Improved API response time by **34%** via **Redis/ElastiCache** caching, connection pooling, and query optimisation on hot-path endpoints.
- Optimised **database indexing strategies** on **MongoDB** and **PostgreSQL** to improve query performance, analysing slow queries and access patterns.
- Authored **production-safe migration scripts** with idempotent operations and backward compatibility, enabling zero-downtime deployments.
- Slashed deployment time by **50%** and build cycles by **33%** by overhauling **Azure DevOps** pipelines with staged gates, parallel jobs, and automated testing.
- Cut technical debt by **55%** and improved runtime performance by **30%** by migrating legacy services to **.NET 8** with modern async patterns.
- Instrumented services with **OpenTelemetry** tracing and **Splunk** dashboards, reducing mean time to diagnose production incidents.
- Wrote unit and integration tests using **xUnit/NUnit**; participated in structured **code reviews** covering architecture, edge cases, and production readiness.

Projects

Expense Tracker – Microservices Application Aug 2023 – Dec 2023

- Built expense tracker using **Spring Boot** with **5+ microservices**, async **Kafka** communication, and **Kong API Gateway** for routing and auth.
- Containerised all services with **Docker** and orchestrated deployments using **Kubernetes**; simulated **1000+ transactions** end-to-end for load testing.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 | CGPA: 8.8
