Sanskar Jain

Full Stack Java Engineer | Java 17 / Spring Boot | AWS (EKS/ECS) | Microservices
Hyderabad, Telangana, India
+91 90216 20156 | sanskarjain0901@gmail.com | linkedin.com/in/sanskar-jain0901

Professional Summary

Software Engineer with **2+ years** of applied experience across the full **Software Development Life Cycle**, building **Java 17/Spring Boot** microservices and full-stack applications in a large corporate environment at Verisk Analytics. Hands-on with packaging services for **AWS EKS**, relational (**PostgreSQL**) and NoSQL data stores, and **Agile CI/CD** delivery with a strong focus on **application resiliency** and **security**. Uses enterprise **AI-assisted development tools** (**Claude Code**) daily for coding, debugging, and documentation, critically reviewing and validating all AI-generated output before merge in line with responsible-AI and secure-handling practices.

Technical Skills

Languages: Java 17, C#, Python, TypeScript, JavaScript, SQL
Backend & Frameworks: Spring Boot, Spring Security, Spring Data JPA/Hibernate, REST APIs, Microservices, Full-Stack Development, API Versioning
Frontend: React 18, TypeScript, HTML, CSS
Cloud, DevOps & Messaging: AWS (EKS, ECS, EC2, Lambda, S3, SNS, SQS, ElastiCache), Apache Kafka, Redis, Docker, Kubernetes, Terraform, CI/CD, Azure DevOps Pipelines, Application Resiliency, Linux/CLI
Security: OAuth 2.0, OIDC, JWT, Okta, RBAC, Secure Coding, Data Sensitivity & Secure Handling of Inputs/Outputs
Databases: PostgreSQL, MongoDB, MySQL, Elasticsearch, Schema Design, Indexing, Query Optimization, Database Migrations
AI-Assisted Development: Claude Code, OpenAI API, Prompt Engineering, Critical Evaluation & Validation of AI-Generated Output
Practices & Tools: Software Development Life Cycle (SDLC), Agile/Scrum, Git, Jira, Confluence, Swagger/OpenAPI, xUnit/NUnit, Code Review, Technical Design Documentation

Professional Experience

Verisk Analytics Jan 2024 -- Present
Software Engineer II Hyderabad, India

- Co-designed **RulesRunner**, a **Spring Boot** microservice using **CQRS** and **AWS SQS** that reduced client wait time from **3000ms to 500ms (83%)**, authoring the technical design (service boundaries, API contracts, **DLQ** handling) and owning it through production support across the **SDLC**.
- Hardened **application resiliency** with idempotent event-driven pipelines, retry/backoff strategies, and **AWS Lambda/SNS** consumers, sustaining **500+ production messages daily** with zero message loss under failure conditions.
- Built **Spring Boot** REST APIs serving **200K+ weekly requests** with structured error handling, model validation, and **Swagger/OpenAPI** documentation; shipped **16** versioned v2 endpoints for backward-compatible client migration.
- Deployed and operated **Java** microservices on **AWS EKS** behind **Kong API Gateway**, establishing **OAuth 2.0/Okta**-issued **JWT** authorization for **6 of 15+** platform services, and migrated legacy session auth to **JWT** bearer tokens over **Redis** with dual-layer revocation, shrinking the post-logout replay window from **7 days to under 1 second**.
- Improved API response time by **34%** through **Redis/ElastiCache** caching and query optimization, and tuned indexing strategies across **PostgreSQL** and **MongoDB** to cut slow-query latency.
- Overhauled **Azure DevOps CI/CD** pipelines with staged gates, parallel jobs, and automated testing as part of **Agile** delivery, cutting deployment time by **50%** and build cycles by **33%**.
- Adopted enterprise **AI-assisted development** (**Claude Code**) as a daily workflow for coding, debugging, and refactoring, critically reviewing and validating all AI-generated code before merge; wrote **xUnit/NUnit** tests reaching **90% coverage** and participated in structured code reviews.

Projects

Attendance & Payroll SaaS -- Full-Stack Java Platform Jul 2026 -- Present
Live: sanskar-engineers-payroll-ui.onrender.com

- Built a multi-tenant attendance and payroll **SaaS** end-to-end as sole engineer on **Spring Boot 4** (**Java 17**), **React 18/TypeScript**, and **PostgreSQL**, now serving **15+ client organizations** in production.
- Secured the API with **Spring Security** and **JWT** (short-lived access + revocable refresh tokens) and **RBAC** across **3 roles** via `@PreAuthorize`, enforcing tenant isolation and deploying the **Docker**-containerized stack to production with managed **PostgreSQL**.

Education & Certifications

B.Tech in Computer Engineering 2020 -- 2024
Vishwakarma Institute of Technology, Pune, India CGPA: 8.8/10
AWS Certified Cloud Practitioner -- Amazon Web Services Oct 2024
