Sanskar Jain

Software Engineer | Java | TypeScript | SQL | AWS | AI-Assisted Development | Hyderabad, India
+91 90216 20156 | sanskarjain0901@gmail.com | linkedin.com/in/sanskar-jain0901

Professional Summary

Software engineer with **2+ years** building **Java/Spring Boot** services and **SQL**-backed APIs on **AWS**, plus a **TypeScript/React** product used by 15+ customer organizations. Plans work as small, reviewable steps, writes design docs before building, and uses **Claude Code**, **GitHub Copilot**, and **LLM APIs** daily while reviewing everything generated.

Technical Skills

Languages: Java 17, TypeScript, SQL, Python
Backend & Frontend: Spring Boot, Spring Security, Hibernate, REST APIs, Swagger/OpenAPI, React
Databases: PostgreSQL, MongoDB, Redis, Elasticsearch
AWS & DevOps: EKS, Lambda, SQS, SNS, S3, ElastiCache, Docker, Kubernetes, Kong API Gateway, Azure DevOps CI/CD
Security & Messaging: OAuth 2.0, JWT, Okta, Apache Kafka
AI Tooling: OpenAI API, Model Context Protocol (MCP) servers, Claude Code, GitHub Copilot, Agentic AI Workflows

Professional Experience

Verisk Analytics Hyderabad, India
Software Engineer II Apr 2026 -- Present
Software Engineer I Jul 2024 -- Mar 2026

- Co-designed **RulesRunner**, a stateless **Java 17/Spring Boot** microservice that moved compliance checks off the client onto an **SQS**-backed worker, cutting user wait time from about 3 s to 0.5 s and allowing horizontal scaling.
- Built the Xactimate import/export backend across **30+ data types** using asynchronous processing, **S3** presigned URLs, and **MongoDB**; transfers became **38%** faster and related customer tickets fell by roughly a quarter.
- Versioned **16 v2 REST** endpoints and documented them with Swagger/OpenAPI for APIs handling about **200K requests a week**, then tuned **SQL** indexes on **PostgreSQL** and **MongoDB**, added **Redis** caching through **ElastiCache**, and used **Elasticsearch** to cut hot-endpoint response times by **34%**.
- Designed event-driven pipelines on **SQS**, **SNS**, and **Lambda** with idempotent consumers, retry/backoff, and dead-letter queues, handling about **500 production messages a day**.
- Rolled out **OAuth 2.0** with Okta-issued **JWTs** on **AWS EKS** behind **Kong API Gateway** for **6 of 15+** platform services, deployed across the eu-west-1 and us-west-2 regions.
- Migrated 4 client applications from Forms Authentication to **JWT** bearer auth over a shared **Redis** session store with token revocation, and added **Okta** Event Hook--driven logout propagation across 4 tenants, with an idempotent webhook receiver and a reconciliation poller for missed events.
- Wrote 2 data-migration scripts that each moved **1M+ records**, and handled production incidents 2--3 times a year, including diagnosing flaky tests and concurrency problems in multithreaded code.
- Used **Claude Code** and **GitHub Copilot** daily for implementation, debugging, and refactoring, reviewing all generated code before merge; worked with **MCP** servers for Atlassian, Splunk, and Dynatrace.
- Built a **Python** agent on the **OpenAI API** with custom orchestration and prompt engineering that drafts and routes **30--50 Jira tickets a week**, in place of manual triage.
- Mentored **4 junior engineers**, reviewed code across multiple scrum teams, and kept **90%** unit and integration test coverage on **Azure DevOps** CI/CD pipelines across biweekly releases.

Software Engineering Intern Jan 2024 -- Jun 2024

Projects

Attendance & Payroll SaaS -- Multi-Tenant Platform (sole developer) Jul 2026 -- Present

- Built and run a multi-tenant payroll product for **15+ small businesses** on **Spring Boot** (**Java 17**), **React** with **TypeScript**, and **PostgreSQL**, deployed with **Docker** on Render.
- Implemented a payroll engine for monthly, daily, and hourly pay with prorated mid-month rate changes, overtime, advances, and carry-forward, locking finalized records against retroactive edits.
- Isolated tenants through a shared-schema `org_id` with **Hibernate** filters, and secured access with **Spring Security**, **JWT** 15-minute access tokens, revocable refresh tokens, and 3-role RBAC.

Expense Tracker -- Microservices Application Aug 2023 -- Dec 2023

- Developed five **Spring Boot** microservices with **Apache Kafka** messaging and **Kong API Gateway**, containerized with **Docker** and run on **Kubernetes**.

Education & Certifications

B.Tech in Computer Engineering, Vishwakarma Institute of Technology, Pune 2020 -- 2024 | CGPA 8.8/10
AWS Certified Cloud Practitioner, Amazon Web Services Oct 2024
