Sanskar Jain

Software Engineer | Java & Transactional Systems | Full-Stack Microservices | Hyderabad, India
+91 90216 20156 | sanskarjain0901@gmail.com | linkedin.com/in/sanskar-jain0901

Professional Summary

Detail-oriented Software Engineer with **2+ years** building transactional, event-driven **Java/Spring Boot** microservices and **REST** services at Verisk Analytics, a data-analytics firm serving the insurance and financial-services industry -- work that has grown a genuine interest in financial markets. Full-stack across **React** front ends and **PostgreSQL/MongoDB** persistence, translating business workflows into technical designs while partnering with engineering and global user-group teams on data feeds and enhancements. Works independently or in Agile teams, volunteering reasoned technical opinions, with proven impact: **83%** latency reduction and zero message loss across **500+** daily asynchronous events.

Technical Skills

Languages: Java, Java 17, C#, Python, TypeScript, SQL, PL-SQL Fundamentals
Backend & Frameworks: Spring Boot, Spring Framework, Spring Security, Spring Data JPA/Hibernate, REST APIs, Microservices, Transactional Systems, Event-Driven Architecture, SOLID Principles, Design Patterns (CQRS, Repository, Factory)
Frontend: React, TypeScript, HTML, CSS, Axios
Messaging & Caching: Apache Kafka, AWS SQS, AWS SNS, RabbitMQ-style Pub/Sub Patterns, Redis, AWS ElastiCache
Cloud & DevOps: AWS (EKS, ECS, Lambda, S3), Docker, Kubernetes, Terraform, CI/CD, Azure DevOps Pipelines, Git
Persistence: PostgreSQL, MySQL, MongoDB, Elasticsearch, Query Optimization, Schema Design
Practices & Tools: Test-Driven Development, Unit/Integration Testing, Code Review, Agile/Scrum, Swagger/OpenAPI, Jira, AI-Assisted Development (GitHub Copilot, Claude Code)

Professional Experience

Verisk Analytics Jan 2024 -- Present
Software Engineer II Hyderabad, India

- Proposed, designed, and implemented **RulesRunner**, a transactional **Java/Spring Boot** microservice using **CQRS** and **AWS SQS** event-driven messaging for real-time compliance checks, cutting wait time from **3000ms to 500ms (83%)** while enabling horizontal scaling.
- Built **REST**-based **Spring Boot** web services serving **200K+ weekly requests**, with structured error handling, model validation, and **Swagger/OpenAPI** contracts for downstream consumers.
- Architected fault-tolerant, **asynchronous event-based** pipelines with idempotent processing, retry/backoff strategies, and dead-letter queues across **Kafka**, **SQS/SNS**, and **RabbitMQ**-style pub/sub patterns, sustaining **500+ messages daily** with zero message loss.
- Partnered with engineering teams across the firm on a data-feed backend for **Xactimate's** import/export of **30+ data types** (**Amazon S3** presigned URLs, **MongoDB**), cutting transfer time **38%**; converted business workflows into specs for **OAuth 2.0/JWT** auth on **AWS EKS** behind **Kong Gateway** across **6 of 15+** services.
- Tuned **PostgreSQL/MongoDB** indexes and **Redis** caching to cut API response time **34%**, and modernized legacy transactional services to async patterns, cutting technical debt **55%** and improving runtime **30%**.
- Wrote **unit** and **integration tests** to reach **90% code coverage** following test-first practices, and overhauled **Azure DevOps CI/CD** pipelines to cut deployment time **50%**.

Projects

Attendance & Payroll SaaS -- Full-Stack Transactional Platform (Java 17, Spring Boot 4, React) Jul 2026 -- Present

- Built and operate a multi-tenant **SaaS** end to end -- **Spring Boot 4/Java 17** backend, **React/TypeScript** front end, **PostgreSQL** persistence -- serving **15+** client organizations in production as sole engineer.
- Designed a transactional payroll engine with a **409 Conflict** rule guarding against retroactive edits, and secured the **REST API** with **Spring Security/JWT** role-based access control.

Expense Tracker -- Event-Driven Microservices Application (Java, Spring Boot, Kafka) Aug 2023 -- Dec 2023

- Developed **5+** independently deployable **Spring Boot** microservices with asynchronous **Apache Kafka** messaging, routed through **Kong API Gateway**, plus a **React** front end of **9+** reusable components.
- Containerized services with **Docker** and orchestrated on **Kubernetes** using **Git**-based version control; simulated **1000+ transactions** end-to-end for load and resilience testing.

Education & Certifications

B.Tech in Computer Engineering 2020 -- 2024
Vishwakarma Institute of Technology, Pune, India CGPA: 8.8/10
AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024
