Sanskar Jain

Backend Software Engineer | Microservices | AWS | Distributed Systems | Hyderabad, Telangana, India
+91 90216 20156 | sanskarjain0901@gmail.com | linkedin.com/in/sanskar-jain0901

Professional Summary

Backend Software Engineer with **2+ years** of experience designing and operating **distributed, domain-driven microservices** and high-throughput **REST APIs** in production at Verisk Analytics, across **PostgreSQL**, **MongoDB**, **Redis**, and **Elasticsearch** data stores, with **AWS SQS/SNS**, **Kafka**, **Kubernetes**, and **CI/CD** pipelines. Proven record of cutting latency by **83%**, serving **200K+ weekly requests**, and mentoring **4 junior engineers**, with a focus on performance, reliability, and translating ambiguous requirements into scalable technical solutions.

Technical Skills

Languages: Java, Python, Go (Golang), C#, TypeScript, JavaScript, SQL
Backend & Frameworks: Spring Boot, Spring Security, Spring Data JPA/Hibernate, .NET 8, ASP.NET Core, REST APIs, Microservices, API Versioning
Architecture & Patterns: Distributed Systems, Domain-Driven Design, Microservices Architecture, Event-Driven Architecture, CQRS, Multi-Tenant SaaS, Repository Pattern, Factory Pattern, Idempotency, Retry/Backoff, Dead-Letter Queues, Caching Strategies
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, ECS, Lambda, ElastiCache, CloudWatch), Docker, Kubernetes, Terraform, CI/CD, Azure DevOps Pipelines, Linux/CLI
Messaging, Caching & Databases: Apache Kafka, AWS SQS/SNS, Redis, Amazon ElastiCache, PostgreSQL, MongoDB, MySQL, Elasticsearch, Schema Design, Query Optimization
Security & Identity: OAuth 2.0, OpenID Connect (OIDC), JWT, Okta, Kong API Gateway, Role-Based Access Control (RBAC)
Testing & Practices: JUnit, xUnit, NUnit, Unit/Integration Testing, Agile/Scrum, Code Review, Mentoring, Git, Jira, Confluence, Swagger/OpenAPI

Professional Experience

Verisk Analytics Jan 2024 -- Present
Software Engineer II Hyderabad, India

- Co-designed **RulesRunner**, a stateless, domain-scoped microservice using **CQRS** and **AWS SQS** that offloaded compliance checks from the client, reducing wait time from **3000ms to 500ms (83% improvement)** while enabling horizontal scaling.
- Architected fault-tolerant **event-driven** pipelines with idempotent processing, retry/backoff strategies, and **AWS Lambda** consumers, sustaining **500+ production messages daily** with zero message loss under failure conditions.
- Engineered a scalable backend for **Xactimate's** import/export of **30+ data types** using asynchronous processing, **Amazon S3** presigned URLs, and **MongoDB**, cutting transfer time **38%** and customer-reported issues **25%**.
- Built **REST APIs** serving **200K+ weekly requests** with sub-second response times and **Swagger/OpenAPI** documentation; implemented **URL-based API versioning** across **16 v2 endpoints** for backward compatibility.
- Established **OAuth 2.0** authentication on **AWS EKS** behind **Kong API Gateway** for **6 of 15+ platform services**, integrating **Okta**-issued **JWT** tokens for secure cross-service authorization.
- Improved API response time by **34%** through **Redis/Amazon ElastiCache** caching and connection pooling, and by optimizing **MongoDB/PostgreSQL** indexing strategies and **Elasticsearch** search queries on high-volume datasets.
- Mentored **4 junior engineers** through structured **code reviews** and pairing sessions covering architecture, edge cases, and production readiness, and wrote unit/integration tests (**xUnit/NUnit**) to reach **90% code coverage**.

Projects

Attendance & Payroll SaaS -- Multi-Tenant Production Platform (Java/Spring Boot) Jul 2026 -- Present
Live: sanskar-engineers-payroll-ui.onrender.com

- Shipped a multi-tenant attendance and payroll **SaaS** to production, now serving **15+ client organizations**, built end-to-end as sole engineer on **Spring Boot 4** (**Java 17**), **React 18** + **TypeScript**, and **PostgreSQL**; automated daily attendance backfill via a **Spring @Scheduled** job and deployed the **Docker**-containerized backend and React SPA to **Render**.
- Enforced tenant isolation with a shared-schema `org_id` discriminator, **Hibernate** filters driven by a **ThreadLocal** tenant context and an **AOP** aspect, plus query-level scoping as defense-in-depth.
- Protected the API with **Spring Security** and **JWT** -- **15-minute** access tokens, revocable **7-day** refresh tokens persisted server-side, and **role-based access control** across **3 roles** via `@PreAuthorize`.

Certifications & Education

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024
B.Tech in Computer Engineering 2020 -- 2024
Vishwakarma Institute of Technology, Pune, India CGPA: 8.8/10
