Sanskar Jain

.NET Software Engineer | ASP.NET MVC | C# | SQL Server / T-SQL | Web Applications
Hyderabad, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

C# and .NET software engineer with 2+ years evaluating requirements, drafting technical specifications with effort estimates, and building production web applications and REST APIs using **ASP.NET Core MVC**, **SQL Server/T-SQL**, and **JavaScript**-based UI layers at Verisk Analytics. Comfortable across **.NET Framework** and modern **.NET** codebases, writing clean, testable, maintainable code with active **peer code reviews** and Agile delivery. Hands-on in database design, stored procedures, and diagnosing live production issues.

Skills

Languages & Web: C#, JavaScript, TypeScript, HTML/CSS, JSON, AJAX, jQuery, Bootstrap
Frameworks & Platforms: .NET Framework, .NET 8, ASP.NET, ASP.NET Core MVC, MVC, Web API, Web Forms (familiarity), REST APIs, Microservices
Databases: SQL Server 2012/2016, T-SQL, Stored Procedures, Database Design, PostgreSQL, MySQL, MongoDB
Dev Tools: Visual Studio 2015+, Azure DevOps (TFS), Git, Swagger, Postman, Docker
Practices: Agile/Scrum, Technical Specifications & Estimation, Peer Code Reviews, Production Support, CI/CD

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Evaluated new and modified feature requests from business analysts and architects, drafting **technical design specifications** and **high-level time estimates** that scoped work for **ASP.NET Core MVC** and **Web API** deliverables.
- Maintained and modernised **ASP.NET MVC** and **Web API 2** applications on **.NET Framework** alongside new **.NET 8** services, applying consistent **C#** design patterns across both stacks for a shared codebase.
- Built **RulesRunner**, a decoupled server-side microservice that offloaded compliance logic from the client layer, reducing wait time from **3000ms to 500ms** (**83%**) using clean, testable software design.
- Engineered a scalable import/export backend for **Xactimate** supporting **30+ data types** using async **C#** and **SQL Server**-backed data pipelines, reducing data transfer time by **38%** and production issues by **25%**.
- Wrote and tuned **T-SQL** queries, **stored procedures**, and indexing strategies on **SQL Server** and PostgreSQL, improving hot-path query performance by **34%** through database design and access-pattern analysis.
- Triaged and resolved **production environment** issues in real time using **Splunk** dashboards with structured logging, reducing mean time to diagnose incidents across services.
- Conducted active **peer code reviews** and maintained **reference documentation** and API contracts, enforcing best practices for clean, readable, maintainable code across the team in an **Agile** environment.
- Overhauled **CI/CD pipelines** in **Azure DevOps (TFS)** with staged gates, parallel jobs, and automated test integration, cutting deployment time by **50%** and build cycles by **33%**.
- Eliminated message loss by designing **AWS SNS**/Lambda pipelines with idempotent processing and retry/backoff handling, shipping **10+ features per quarter** with strong ownership from design through production.

Projects

Expense Tracker – Full-Stack Web Application Aug 2023 – Dec 2023
C#, JavaScript/TypeScript, SQL, Docker, Kong API Gateway

- Built a full-stack web application with **5+ microservices**, a **JavaScript/TypeScript** UI layer consuming **REST/JSON** APIs and **AJAX** calls, and **SQL**-backed persistence; containerised with **Docker**.
- Integrated **Kong API Gateway** for routing, load balancing, and auth; authored technical specifications and reference documentation covering data models and API contracts, simulating **1000+ end-to-end transactions**.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

B.Tech in Computer Engineering — Vishwakarma Institute of Technology, Pune (SPPU) 2024 | CGPA: 8.8
