Sanskar Jain

DevSecOps Engineer | CI/CD | Kubernetes | Terraform | AI Agents / MCP
Hyderabad, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Software engineer with 2+ years delivering secure cloud services, containerised workloads, and automated **CI/CD** pipelines. Hands-on with **Azure DevOps**, Git, AWS, Kubernetes/EKS, Docker, Terraform, C#, Python, and DevSecOps practices grounded in OAuth 2.0, JWT validation, and production observability. Built internal **AI agents** using the OpenAI API and **Model Context Protocol (MCP)** integrations.

Skills

DevSecOps & Security: Secure SDLC, OAuth 2.0, JWT, Okta, Kong Gateway, Input Validation, Secrets Management, Security Gates
Cloud & Containers: AWS (EKS, ECS, Lambda, S3, SNS, SQS), Kubernetes, Docker, Terraform, Infrastructure as Code
CI/CD & Tools: Azure DevOps, Git, GitHub, Visual Studio, CI/CD Pipelines, Automated Testing, Swagger/OpenAPI
AI & Automation: AI Agents, Model Context Protocol (MCP), OpenAI API, Prompt Engineering, Agent Orchestration, REST/JSON
Development & Operations: C#, Python, .NET 8, ASP.NET Core, Microservices, Splunk, OpenTelemetry, Troubleshooting

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Overhauled **Azure DevOps CI/CD** pipelines with staged approvals, parallel jobs, automated tests, and deployment gates, reducing release time by **50%** and build cycles by **33%**.
- Secured **ASP.NET Core** services on AWS EKS behind **Kong Gateway**, integrating **OAuth 2.0**, Okta-issued JWT validation, and authorization controls for protected cross-service communication.
- Applied **DevSecOps** practices across design, review, testing, and deployment, including input validation, least-privilege access, secure API contracts, and quality gates.
- Containerised workloads with **Docker**, orchestrated services on **Kubernetes/EKS**, and used **Terraform IaC** for repeatable environment provisioning and lifecycle management.
- Architected event-driven **AWS Lambda**, SNS, and SQS pipelines with idempotent processing, retry/backoff, and dead-letter handling, ensuring zero message loss during downstream failures.
- Built **LLM-powered workflow agents** with the **OpenAI API**, prompt engineering, and custom orchestration to automate Jira ticket creation and task routing across internal teams.
- Developed **MCP**-based tool integrations that exposed structured capabilities to agents, connecting model-driven workflows with external services through validated REST/JSON contracts.
- Co-designed **RulesRunner**, a stateless C#/.NET microservice using CQRS and SQS that reduced client wait time from **3000ms to 500ms** (**83%**) and enabled horizontal scaling.
- Instrumented services with **OpenTelemetry** and **Splunk**, accelerating troubleshooting of latency, authentication, deployment, and distributed pipeline failures.

Projects

Internal Workflow Automation Agent 2025 – 2026
OpenAI API, MCP, C#/Python, Jira, REST APIs

- Created an agent that interprets task requests and drafts Jira tickets using prompt-engineered OpenAI API calls, context management, validation, and custom workflow orchestration.
- Integrated MCP tools with downstream services and business rules, enabling reusable, controlled agent actions while reducing repetitive manual coordination.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

B.Tech in Computer Engineering — Vishwakarma Institute of Technology, Pune (SPPU) 2024 | CGPA: 8.8
