Sanskar Jain

Backend Software Engineer | Java / Spring Boot | MongoDB | Elasticsearch | Microservices
Hyderabad, Telangana, India
9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Backend software engineer with 2+ years building scalable **Java/Spring Boot** microservices and high-volume data pipelines at Verisk Analytics. Strong algorithmic problem-solver who owns features end-to-end – from design through production support – across **MongoDB**, **PostgreSQL**, and **Elasticsearch** search workloads. Experienced with distributed, event-driven systems (**Kafka**, **SQS/SNS**), cloud-native deployment on **AWS**, and containerized **CI/CD** pipelines. Fast learner who adapts quickly to new technologies and takes independent ownership of deliverables through the full product lifecycle.

Skills

Languages: Java 17, C#, Python, SQL
Backend & Frameworks: Spring Boot, Spring Framework, Spring Data JPA, Hibernate, REST APIs, Microservices, Event-Driven Architecture, CQRS
Data & Search: MongoDB, Elasticsearch, PostgreSQL, MySQL, Query Optimization, Indexing, High-Volume Data Processing
Messaging & Distributed Systems: Kafka, AWS SQS/SNS, Distributed Systems Design, Async Processing, Idempotent Pipelines
Cloud & DevOps: AWS (S3, EKS, ECS, Lambda, ElastiCache), Docker, Kubernetes, Terraform, Azure DevOps, CI/CD, Git
Algorithms & Practices: Data Structures & Algorithms, Design Patterns (SOLID), Problem-Solving, Product Lifecycle Ownership
Testing & Tools: JUnit, xUnit, NUnit, Swagger/OpenAPI, Splunk, OpenTelemetry, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Designed and owned **RulesRunner** end-to-end – a **Java/Spring Boot** microservice using **CQRS** and **SQS** – reducing client wait time from **3000ms to 500ms (83%)** while enabling horizontal scaling under peak load.
- Engineered a high-volume import/export pipeline handling **30+ data types** on **MongoDB** using async processing and **S3** presigned URLs, cutting transfer time by **38%** and defect rate by **25%**.
- Built **Spring Boot** REST APIs serving **200K+ weekly requests**, applying strong algorithmic/data-structure fundamentals to error handling, validation, and **Swagger/OpenAPI**-documented contracts.
- Optimized **MongoDB/PostgreSQL** indexing for high-throughput collections and integrated **Elasticsearch** to cut search query latency, improving API response time by **34%** via **Redis** caching.
- Architected event-driven, distributed processing with idempotent handlers and **SNS**-based publishing across **6+ microservices**, ensuring zero message loss under failure conditions.
- Took independent ownership of features across the full product lifecycle – requirements, design, implementation, testing, and production support – with product managers and QA.
- Cut deployment time by **50%** by overhauling **Azure DevOps CI/CD** pipelines with staged gates and parallel jobs; authored zero-downtime migration scripts.
- Reduced technical debt by **55%** and improved runtime performance by **30%** migrating legacy services to modern async patterns; wrote **JUnit/xUnit** tests and led code reviews.

Projects

Expense Tracker – Java Spring Boot Microservices Aug 2023 – Dec 2023

- Built **5+** independently deployable **Spring Boot** microservices with async **Kafka** messaging, containerized with **Docker/Kubernetes**; simulated **1000+ transactions** for load testing.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 | CGPA: 8.8
