THE AI JOB HUNT PLAYBOOK

BEAT THE ATS · GET MORE INTERVIEWS · LAND THE OFFER

@swapsays_wtf

MOST RESUMES DON'T GET REJECTED BY A HUMAN.

They get rejected by a bot, before a human ever sees them. This playbook walks you through exactly how to use AI to fix that — from your resume, to your interview prep, to the follow-up email that seals it.

6 sections. 6 prompts. Copy, paste, customize.

SECTION 1

Get Your Match Score

PROMPT

"You're a recruiter who's screened 10,000+ resumes for [role]. Compare my resume against this job description. Score the match out of 100 and list the 5 keywords I'm missing that are costing me points."

→ **Paste your resume, then paste the job description.**

WHAT IT DOES

- Tells you exactly where you're leaking points before you even apply
- Surfaces the specific keywords the ATS is scanning for
- Gives you a clear list to fix before you submit

SECTION 2

Rewrite Your Experience Bullets

PROMPT

"Rewrite my experience section using this formula for every bullet: Did [X], measured by [Y], by doing [Z]. Weave in the missing keywords naturally — don't force them."

BEFORE	AFTER
Handled marketing for the company.	**Grew organic traffic 3x (40K → 120K monthly visits) by rebuilding the SEO content pipeline and shipping 2 posts/week.**

WHAT IT DOES

- Rebuilds your bullets around the keywords you're missing
- Forces every line to be measurable, not just descriptive
- Makes your impact obvious in a 6-second skim

SECTION 3

Pressure-Test for ATS

PROMPT

"Act like an ATS parser. Read my resume and flag anything a bot would fail to parse — tables, columns, headers, graphics, weird fonts. Give me a fix list."

WHAT IT DOES

—Catches formatting that silently tanks your resume before a human ever opens it
—Gives you a specific fix list, not a vague warning

TIP *Check these yourself first — multi-column layouts, text inside images, and info stuffed into headers/footers are the most common killers.*

SECTION 4

Rehearse the Hardest Questions

PROMPT

"You're the hiring manager for this role. Ask me the 3 hardest technical questions you'd realistically ask. After each answer, tell me what a strong answer would've included, based on my background and the JD."

WHAT IT DOES

—Puts you in front of the questions that actually decide the interview
—Grades your answer instead of just handing you a script

TIP *Run this one in voice mode if your tool supports it — answering out loud is a different skill than typing it out.*

SECTION 5

Write One That Doesn't Read Like AI

PROMPT

"Write me a cover letter under 300 words. Open with something that shows I actually understand this company's problem — not a generic hook. Pull my top 3 relevant wins. Close with a specific next step, not 'looking forward to hearing from you.'"

WHAT IT DOES

—Kills the generic AI-cover-letter tone recruiters skim past
—Anchors the letter to the company's actual problem, not your resume restated
—Ends with a next step instead of a passive sign-off

SECTION 6

Send the Follow-Up That Gets Remembered

PROMPT

"Write a follow-up email for my interview with [company] for [role]. Reference [specific thing discussed]. Under 150 words. Should sound like a person who's genuinely interested, not a template."

→ **Send within 24–48 hours.**

WHAT IT DOES

—Keeps you top of mind while the interview is still fresh
—Sounds specific and human, not copy-pasted

THE FULL WORKFLOW

Run this exact sequence for every application.

1	Score your resume against the job description
2	Rewrite your bullets with the missing keywords
3	Run the ATS check and fix what it flags
4	Mock-interview yourself on the hardest questions
5	Customize the cover letter for this role
6	Apply
7	Follow up within 48 hours

AVOID THESE

3 Mistakes People Make With AI Job Hunting

Reusing one resume for every application.
Fix: Score + rewrite for each job. It takes 5 minutes and it's the single biggest lever.

Treating the AI's first draft as final.
Fix: Always edit for your actual voice before you send anything.

Skipping the ATS check.
Fix: Run it before you submit, not after you've heard nothing back for three weeks.
