Sanskar Jain

.NET Software Engineer | MVC | Entity Framework | C# | SQL Server
Hyderabad, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

C# and .NET software engineer with 2+ years designing and shipping production web applications and REST APIs using **ASP.NET MVC**, **.NET Core**, and the **Entity Framework** ORM at Verisk Analytics. Comfortable across the full Microsoft development stack – relational database design, **T-SQL** query tuning, **Web API**/JSON integrations, and unit testing with **NUnit** and **Moq**. Strong Agile team contributor with clear technical communication and hands-on production support experience.

Skills

Languages & Web: C#, JavaScript, HTML/CSS, JSON, AJAX, jQuery, Bootstrap
Frameworks & ORM: .NET 8, .NET Core, ASP.NET MVC, Web API, Web Services, Entity Framework (EF Core / EF6), REST APIs, Microservices
Databases: SQL Server, T-SQL, PostgreSQL, MySQL, MongoDB, RDBMS Concepts, Query Optimization, Database Design
Testing: NUnit, xUnit, **Moq**, Unit Testing, Integration Testing
Dev Tools & Practices: Visual Studio, Azure DevOps (TFS/VSTS), Git, Swagger, Postman, Docker, Agile/Scrum, Peer Code Reviews, Technical Documentation

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Built and maintained **ASP.NET MVC/Web API** REST services handling **200K+ weekly requests**, using **Entity Framework** for data access, structured error handling, input validation, and **JSON** contract design.
- Modelled and queried relational data through **Entity Framework (EF Core)**, replacing hand-written **T-SQL** data access in hot-path endpoints and cutting boilerplate mapping code across services.
- Designed **RulesRunner**, a decoupled server-side microservice that offloaded compliance logic from the client layer, reducing wait time from **3000ms to 500ms** (**83%**) through clean, testable **C#**/MVC design patterns.
- Engineered a scalable import/export backend for **Xactimate** supporting **30+ data types** using async **C#** and **SQL**-backed data pipelines, reducing data transfer time by **38%** and production issues by **25%**.
- Wrote unit and integration tests with **NUnit** and **Moq**, mocking dependencies to isolate business logic, raising test coverage on critical services and catching regressions before release.
- Improved **API response time by 34%** through targeted **T-SQL query optimisation**, indexing strategy reviews, and **Entity Framework** query tuning (eager loading, projection queries) on high-traffic endpoints.
- Conducted active **peer code reviews** and maintained technical documentation and API contracts, enforcing best practices for clean, maintainable **.NET** codebases across the engineering team.
- Overhauled **CI/CD pipelines** in **Azure DevOps (TFS/VSTS)** with staged gates and automated test integration, cutting deployment time by **50%** while enforcing **Agile** delivery standards.
- Reduced technical debt by **55%** and improved runtime performance by **30%** by migrating legacy **ASP.NET** services to **.NET Core**, modernising dependency injection and async patterns.
- Resolved **production environment** issues in real time using **Splunk** dashboards with structured logging, reducing mean time to diagnose incidents across services.

Projects

Expense Tracker – Full-Stack Web Application Aug 2023 – Dec 2023
C#, Spring Boot, JavaScript, Docker, SQL

- Built a full-stack application with **5+ microservices** and a **JavaScript** UI layer consuming **REST/JSON** APIs backed by **SQL** persistence; containerised with **Docker**, cutting environment setup by **60%**.
- Wrote unit tests against service layers using mocked dependencies, and simulated **1000+ end-to-end transactions** to validate correctness under load.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

B.Tech in Computer Engineering — Vishwakarma Institute of Technology, Pune (SPPU) 2024 | CGPA: 8.8
