Summary

Backend engineer with 2+ years of experience building large-scale, high-volume distributed systems and event-driven microservices at Verisk Analytics. Proficient in **Java** and the JVM ecosystem with hands-on expertise in **Kafka**, **AWS SQS/SNS**, **Kubernetes**, and robust API contract design. Enthusiastic about ramping on **Scala** and delivering highly integrated, testable systems in Agile teams.

Skills

Languages: Java, C#, Python, Scala (ramping)
Backend: Spring Boot, .NET 8, ASP.NET Core, REST APIs, Microservices, CQRS, API Versioning, OOP, Design Patterns
Messaging: Kafka, AWS SQS, AWS SNS, Event-Driven Architecture, Idempotent Processing, DLQ, Retry/Backoff
Cloud & DevOps: AWS (S3, EKS, ECS, Lambda, ElastiCache), Docker, Kubernetes, Terraform, CI/CD
Databases: PostgreSQL, MySQL, MongoDB, SQL Schema Design, ORM, Indexing, Query Optimization
Security & Tools: OAuth 2.0, JWT, Okta, Kong Gateway, OpenTelemetry, Splunk, Swagger/OpenAPI, Jira, Agile/Scrum

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Co-designed **RulesRunner**, a stateless **Java**-based microservice using **CQRS** and **SQS** that offloaded compliance checks from clients, reducing wait time from **3000ms to 500ms (83%)** and enabling horizontal scaling.
- Authored technical design documentation defining service boundaries, API contracts, **DLQ** handling, and **SNS**-based event publishing patterns for distributed consumers.
- Architected event-driven system with idempotent processing, retry/backoff strategies, and **AWS Lambda** pipelines – ensuring zero message loss under failure conditions at high throughput.
- Engineered scalable backend for **Xactimate's** import/export of **30+ data types** using async processing, **S3 presigned URLs**, and **MongoDB**, reducing transfer time by **38%** and defect rate by **25%**.
- Designed and built REST APIs handling **200K+ weekly requests** with versioned client/server contracts, structured error handling, input validation, and **Swagger/OpenAPI** documentation.
- Implemented **URL-based API versioning** ensuring backward compatibility and seamless client migrations across service versions without breaking integrations.
- Deployed and secured services on **AWS EKS** (Kubernetes) behind **Kong Gateway** with **OAuth 2.0** and **Okta JWT** tokens for cross-service authorization.
- Improved API response time by **34%** via **Redis/ElastiCache** caching, connection pooling, and **SQL query optimisation** on hot-path endpoints.
- Optimised **PostgreSQL** and **MongoDB** indexing strategies and schema design by analysing slow-query patterns to improve throughput at scale.
- Mentored junior engineers through structured **code reviews** covering OOP principles, design patterns, edge cases, and production readiness.
- Slashed deployment time by **50%** and build cycles by **33%** by overhauling **CI/CD** pipelines with staged gates, parallel jobs, and automated testing.
- Instrumented services with **OpenTelemetry** tracing and **Splunk** dashboards, reducing mean time to diagnose production incidents.

Projects

Expense Tracker – Microservices Application Aug 2023 – Dec 2023

- Built a **Java/Spring Boot** application with **5+ microservices**, async **Kafka** event messaging, and **Kong API Gateway** for routing, auth, and load balancing.
- Containerised all services with **Docker** and orchestrated on **Kubernetes**; validated end-to-end reliability with **1000+ simulated transactions** for load and integration testing.

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
AWS Certified Cloud Practitioner – Amazon Web Services Oct 2024
