Sanskar Jain

Backend Engineer | Java, Go, C#, Python | Distributed Systems & Platform Engineering
Hyderabad, India | 9021620156 | sanskarjain0901@gmail.com | linkedin.com/in/sanskar-jain0901

Summary

Backend engineer with 2+ years shipping production-grade distributed systems and high-throughput APIs at Verisk Analytics. Owned event-driven microservices end-to-end — from design and coding to CI/CD and on-call observability — on AWS. Strong bias for action, ownership over outcomes, and a track record of improving reliability and performance at scale.

Skills

Languages: Java, Go, C#, Python, TypeScript
Backend: Spring Boot, .NET 8, ASP.NET Core, REST APIs, Microservices, Kafka, Redis, GraphQL
Cloud & Infra: AWS (SQS, SNS, S3, Lambda, EKS, ECS), Docker, Kubernetes, Terraform, CI/CD
Databases: MongoDB, PostgreSQL, MySQL
Observability: Splunk, structured logging, alerting dashboards, distributed tracing, performance tuning

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II *Hyderabad, India*

- Built **RulesRunner**, a platform microservice using **AWS SQS** to offload estimate compliance checks from the client, cutting end-user wait time from **3000ms to 500ms** (**83%**) and decoupling rules logic for independent scaling across workflows.
- Engineered scalable backend for **Xactimate's** import/export pipeline handling **30+** data types with async processing, **AWS S3** presigned URLs, and MongoDB, reducing data transfer time by **38%** and user-reported issues by **25%**.
- Delivered **200K+** weekly requests reliably by building **ASP.NET Core** REST APIs with structured error handling, input validation, rate limiting, and Swagger-documented contracts — owned end-to-end from design to deployment.
- Improved API **p95 response time by 34%** via Redis/ElastiCache caching, connection pooling, and targeted query optimisation on hot-path endpoints under production load.
- Designed **AWS SNS + Lambda + S3** async pipelines with idempotent processing and retry/backoff strategies, eliminating message loss under failure conditions and improving system resilience.
- Built real-time **Splunk** dashboards and structured logging instrumentation to surface latency spikes, error trends, and pipeline failures — reducing mean time to diagnose production incidents significantly.
- Slashed deployment time by **50%** by overhauling **Azure DevOps** CI/CD pipelines with staged gates, parallel jobs, and automated test integration, removing all manual release steps.
- Cut technical debt by **55%** and improved runtime performance by **30%** migrating legacy services to **.NET 8**, modernising async patterns, DI, and SDK tooling.

Projects

Expense Tracker — Full-Stack Microservices Platform Aug 2023 – Dec 2023
Java, Spring Boot, Kafka, Docker, PostgreSQL, Kong API Gateway

- Built a distributed expense tracker with **Java**/Spring Boot across **5+ microservices** communicating via async **Kafka** events, simulating **1000+ transactions** end-to-end.
- Integrated **Kong API Gateway** for routing, load balancing, and auth; containerised all services with **Docker**, cutting local setup time by **60%**.

Go REST Microservice 2025
Go, net/http, REST, Docker, PostgreSQL

- Built a lightweight **Go** REST service using the standard `net/http` package, implementing clean routing, middleware, and JSON request/response handling.
- Containerised with **Docker** and connected to a **PostgreSQL** backend, reinforcing Go's concurrency model and idiomatic error handling patterns.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

B.Tech in Computer Engineering, Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 | 8.8 GPA
