Summary

Backend engineer with 2+ years building high-throughput, low-latency distributed systems at Verisk Analytics using **Java/Spring Boot**, **C#/.NET 8**, **Kafka**, and **AWS**. Ships resilient REST APIs with retry/circuit-breaker patterns, sub-100ms cached hot paths, and idempotent event-driven pipelines. Owns services end-to-end – from JVM performance tuning to on-call observability – and uses AI coding tools daily to speed up delivery.

Skills

Languages: Java, C#, Python
Backend: Spring Boot, .NET 8/ASP.NET Core, REST & gRPC API Design, Microservices, Kafka, Redis, CQRS, Circuit Breakers/Backpressure
Concurrency & Performance: JVM tuning, async/non-blocking I/O, connection pooling, sub-100ms latency budgets
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, ECS, Lambda, ElastiCache), Docker, Kubernetes, Terraform, CI/CD
Reliability & Observability: OpenTelemetry, Splunk, on-call ownership, metrics/logging/alerting, SLA management
Security: OAuth 2.0, JWT, Okta, Kong Gateway
Databases: MongoDB, PostgreSQL, MySQL, indexing, query optimization
AI Tooling: Claude Code (daily use for feature implementation, debugging, and refactoring)

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Architected **RulesRunner**, a stateless **Java/Spring Boot** policy-enforcement microservice offloading rule checks from the client via **AWS SQS**, cutting wait time from **3000ms to 500ms (83%)** while enabling horizontal scaling.
- Engineered REST APIs handling **200K+ weekly requests** with configurable timeouts, exponential-backoff retries, and circuit-breaker safeguards that gracefully degraded non-critical paths during upstream outages.
- Orchestrated **Kafka**- and **SNS/SQS**-based pipelines with idempotent consumers and dead-letter queues, guaranteeing zero message loss across **30+ data-type** import/export flows.
- Tuned **Redis/ElastiCache** caching, JVM garbage collection, and connection pooling to keep hot-path endpoints under **100ms**, lifting overall API response time by **34%**.
- Secured containerized services on **AWS EKS** behind **Kong Gateway** with **OAuth 2.0** and **Okta**-issued JWTs across service-to-service calls.
- Overhauled **Azure DevOps** CI/CD pipelines with staged gates and parallel test jobs, shrinking deployment time by **50%** and build cycles by **33%**.
- Instrumented production services with **OpenTelemetry** tracing and **Splunk** alerting, carrying on-call ownership that shortened mean time to diagnose incidents.
- Adopted **Claude Code** daily to implement, debug, and refactor production features, reviewing AI-generated code before merge to speed delivery without sacrificing quality.
- Cut technical debt by **55%** and improved runtime performance by **30%** migrating legacy services to **.NET 8** with modern async patterns.

Projects

Expense Tracker – Microservices Application Aug 2023 – Dec 2023

- Delivered an expense tracker using **Spring Boot** with **5+ microservices**, async **Kafka** messaging, and **Kong API Gateway** for routing and auth.
- Packaged services with **Docker** and load-tested via **Kubernetes**, simulating **1000+ transactions** end-to-end.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
