Summary

Software engineer with 2+ years of production experience in **C#/.NET** and cloud-native systems at Verisk Analytics, a regulated data and analytics company. Applies **SOLID principles**, design patterns, and dependency injection to build secure, performant, and scalable REST APIs and microservices. Skilled in **Azure DevOps** CI/CD, **Docker**, relational/NoSQL databases, and Agile SCRUM; consistently delivers quality code with strong unit and integration test coverage.

Skills

Languages: C#, Java, Python, JavaScript, TypeScript, SQL
Backend: .NET Core / .NET 8, ASP.NET Core, REST APIs, Microservices, SOLID Principles, Design Patterns, Dependency Injection, CQRS
Frontend: React (basic), Angular (basic), jQuery, HTML, CSS
Cloud & DevOps: Azure DevOps, CI/CD Pipelines, Quality Gates, AWS (EKS, Lambda, S3, SQS/SNS), Docker, Kubernetes, Terraform
Databases: MongoDB, PostgreSQL, MySQL, Azure SQL / SQL Server, Cosmos DB (NoSQL), Redis, Indexing, Query Optimisation
Azure PaaS: Azure Functions, Azure Storage, Azure Key Vault, Azure Service Bus, Application Gateway
Security: OAuth 2.0, JWT, Okta, Secure coding practices
Testing & Tooling: xUnit, NUnit, Swagger/OpenAPI, OpenTelemetry, Splunk, Visual Studio, Jira, Agile SCRUM

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Built production **ASP.NET Core** REST APIs serving **200K+ weekly requests**, applying **SOLID principles**, repository pattern, and **dependency injection**; documented all contracts with **Swagger/OpenAPI**.
- Designed **RulesRunner**, a stateless compliance microservice following **CQRS** and clean architecture patterns — reducing client wait time from **3000ms to 500ms (83%)** with horizontal scaling.
- Engineered async import/export backend for **Xactimate** handling **30+ data types** using S3 presigned URLs and **MongoDB** (NoSQL document model), reducing transfer time by **38%** and defect rate by **25%**.
- Implemented **OAuth 2.0** security with **Okta JWT** tokens and Kong Gateway — adopted a security-first approach across all service boundaries, following least-privilege and input validation principles.
- Improved API response time by **34%** via **Redis** caching, connection pooling, and query optimisation; optimised **MongoDB** and **PostgreSQL** indexing strategies to build performant, scalable data access layers.
- Wrote comprehensive **unit and integration tests** with **xUnit/NUnit**; integrated automated test suites into **Azure DevOps** CI/CD pipelines with staged quality gates and parallel jobs, cutting deployment time by **50%**.
- Containerised services using **Docker** and orchestrated on **Kubernetes (EKS)**; architected event-driven pipelines with idempotent **AWS Lambda** functions, DLQ handling, and retry/backoff strategies.
- Migrated legacy services to **.NET 8** with modern async patterns and SOLID-compliant architecture, cutting technical debt by **55%** and improving runtime performance by **30%**; authored idempotent DB migration scripts for zero-downtime releases.
- Collaborated in **Agile SCRUM** teams — sprint planning, stand-ups, and structured **code reviews** covering architecture, security, and production readiness.

Projects

Expense Tracker – Microservices Application Aug 2023 – Dec 2023

- Built cloud-native expense tracker with **5+ Spring Boot** microservices, async **Kafka** messaging, **Docker**, and Kubernetes; applied dependency injection and design patterns throughout; simulated **1000+ transactions** for functional testing.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
