Sanskar Jain

Software Engineer — Java, Spring Boot, REST APIs & AI-Integrated Backend
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Software engineer with 2+ years of experience building scalable **Java Spring Boot** microservices, REST APIs, and cloud-native backend systems at Verisk Analytics. Hands-on with **OAuth2/JWT** security, complex API integrations, relational databases, and CI/CD pipelines; experienced integrating **AI agent workflows** into backend systems. Proven ability to deliver end-to-end solutions, communicate technical decisions to diverse stakeholders, and thrive in Agile environments with evolving architecture.

Skills

Languages: Java, C#, Python, TypeScript
Backend: Spring Boot, .NET 8, ASP.NET Core, REST APIs, SOAP, Microservices, GraphQL, Kafka, Redis
Security: OAuth2, JWT, SSO-based Authentication, Input Validation
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, Terraform, CI/CD, Azure DevOps
Databases: PostgreSQL, MySQL, MongoDB
AI & Tools: GitHub Copilot, Cursor, LLM Workflows, Jira, Confluence, Swagger, Splunk, Postman

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Designed and delivered scalable **Java Spring Boot** microservices for **Xactimate**, a large-scale SaaS platform, shipping **10+ features per quarter** in Agile sprints tracked via **Jira** and documented in **Confluence**.
- Built **RulesRunner**, an event-driven microservice using **AWS SQS** that offloaded compliance checks from the client, reducing wait time from **3000ms to 500ms** (**83%**) via async processing and decoupled architecture.
- Engineered complex **REST and SOAP API integrations** for import/export of **30+ data types** with advanced **JSON processing and data transformation**, reducing transfer time by **38%** and user-reported issues by **25%**.
- Secured **ASP.NET Core** REST APIs with **OAuth2/JWT**-based authentication, structured error handling, and **Swagger**-documented contracts, achieving reliable **200K+** weekly requests with clear API ownership.
- Integrated **AI agent workflows** using **Model Context Protocol (MCP)** servers to connect LLM agents with **Jira** and **GitHub**, enabling automated ticket management and code workflows; leveraged **GitHub Copilot** and **Cursor** daily to accelerate engineering delivery.
- Improved API response time by **34%** through **Redis**/ElastiCache caching, connection pooling, and targeted **PostgreSQL** query optimisation on hot-path endpoints.
- Slashed deployment time by **50%** by overhauling **CI/CD pipelines** in Azure DevOps with staged gates, parallel jobs, and automated test integration, enforcing continuous delivery best practices.
- Cut technical debt by **55%** and improved runtime performance by **30%** by migrating legacy services to **.NET 8**, applying modern dependency injection, async patterns, and containerisation via **Docker** and **Kubernetes**.
- Eliminated message loss by architecting **AWS SNS**, Lambda, and S3 pipelines with idempotent processing and retry/backoff; reduced MTTR using **Splunk** dashboards and communicated findings to technical and non-technical stakeholders.
- Accelerated build and test cycle by **33%** through parallelised automated testing, build caching, and pipeline optimisation; authored technical design docs and API contracts to support cross-team alignment and rapid onboarding.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built end-to-end application using **Java Spring Boot** with **5+** microservices, async **Kafka** messaging, **Docker**, **Kong API Gateway**, and a **TypeScript** frontend; simulated **1000+** transactions end-to-end.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
