Summary

Backend and distributed systems engineer with 2+ years of experience building large-scale microservices, data pipelines, and SaaS architectures on cloud and enterprise platforms. Proficient in Java, Python, and C# with strong analytical, debugging, and troubleshooting skills applied to complex distributed systems problems. Passionate about building quality products through rigorous testing methodologies, data-driven decision making, and AI-assisted workflows in Agile/SCRUM teams.

Skills

Languages: Java (Java 17), Python, Go, C#, TypeScript
Backend & Systems: Spring Boot, ASP.NET Core, REST APIs, Microservices, SaaS Architecture, Distributed Computing, Kafka, Redis
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda), CI/CD (Jenkins/Azure Pipelines), Docker, Kubernetes, Terraform, Linux
Databases: PostgreSQL, MySQL, MongoDB
Tools: Git, GitHub, Jira, Maven, Swagger, Postman, Splunk

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Designed and built **RulesRunner**, a large-scale distributed **microservice** consuming **SQS** messages to decouple compliance rules into an independently scalable component, reducing client wait time from **3000ms to 500ms** (**83%**); articulated design and trade-offs to stakeholders to drive adoption.
- Engineered a **data management** pipeline for import/export of **30+** data types using async processing, **AWS S3** presigned URLs, and distributed repositories, reducing transfer time by **38%** and user-reported defects by **25%**.
- Built production REST APIs with structured error handling, strict input validation, OOP design patterns (SOLID), and **Swagger**-documented contracts, ensuring correctness and stability across a **SaaS** platform serving **200K+ weekly requests**.
- Diagnosed and resolved complex distributed system failures by instrumenting services with structured logging and **Splunk** dashboards, reducing mean incident diagnosis time by **40%** and surfacing latency and pipeline anomalies in real time.
- Delivered **85%+** unit and integration test coverage using **JUnit 5** and **Mockito**, enforcing testing methodologies across the team and accelerating build cycles by **33%** through parallelised execution.
- Engineered async **distributed** messaging pipelines using **AWS SNS**, Lambda, and S3 with idempotent processing and retry/backoff logic, eliminating message loss under failure conditions at scale.
- Overhauled **CI/CD** pipelines (Jenkins/Azure DevOps) with staged gates and automated test integration, slashing deployment time by **50%**; leveraged **AI tools** to streamline code reviews, test generation, and release workflows.

Projects

Expense Tracker – Distributed Java Microservices Aug 2023 – Dec 2023

- Architected a distributed expense tracker using **Java 17** and **Spring Boot** with **5+** independently deployable microservices communicating via async **Kafka** topics across service boundaries.
- Modelled domain entities with **Spring Data JPA** and **Hibernate**, applying clean service layering to separate persistence, business logic, and API concerns; validated with **1000+** simulated transactions end-to-end.
- Containerised all services with **Docker** and Docker Compose; integrated **Kong API Gateway** for routing, rate limiting, and token-based authentication across microservices.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Built a stock advisory platform in **Python** using **LSTM** models for 30-day price predictions with Yahoo Finance API and **Firebase** for real-time data ingestion; deployed via **Streamlit** with end-to-end data pipeline from ingestion to ML inference.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
