Summary

Full-stack engineer with 2+ years turning vague, underspecified problems into shipped production features at Verisk Analytics – spanning **React/JavaScript** UIs, **C#/.NET** and **Java/Spring Boot** services, and an **LLM-powered agent** built on the **OpenAI API**. Comfortable reasoning about build-vs-buy and LLM-vs-deterministic tradeoffs, making independent UX calls, and shipping with high agency rather than waiting for a fully-scoped ticket. Uses **Claude Code** daily as a core part of the workflow.

Skills

Languages & Web: C#, Java, JavaScript, TypeScript, HTML5, CSS3, Python
Frontend: React, REST/JSON API consumption, independent UX iteration
LLM & Agentic AI: OpenAI API, Prompt Engineering, Non-Determinism Handling, Context Management, Agent Orchestration
Backend: .NET 8/ASP.NET Core, Spring Boot, REST APIs, Microservices, CQRS, Kafka, Redis
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda, ElastiCache), Docker, Kubernetes, CI/CD
Databases: MongoDB, PostgreSQL, MySQL, query optimization
AI Coding Tools: Claude Code (daily use for implementation, debugging, refactoring)

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Shipped **RulesRunner** from an underspecified "checkout feels slow" complaint to a production microservice offloading rule checks asynchronously via **AWS SQS**, cutting client wait time from **3000ms to 500ms (83%)** without a fully scoped ticket.
- Designed a prompt-engineered **Jira** ticket-creation agent on the **OpenAI API**, handling prompt drift and non-deterministic outputs with validation and context-passing logic that reliably routed real task requests.
- Built **REST APIs** (**ASP.NET Core/Java Spring Boot**) serving **200K+ weekly requests**, documenting contracts in **Swagger/OpenAPI** for downstream teams to integrate against.
- Weighed build-vs-buy and latency-vs-complexity tradeoffs when choosing **CQRS** and event-driven **SNS/SQS** patterns over synchronous calls, pushing back on requests that added complexity without user-facing benefit.
- Reduced technical debt by **55%** and lifted runtime performance by **30%** by migrating legacy services to **.NET 8** on my own initiative, without a dedicated migration ticket.
- Improved API response time by **34%** through **Redis** caching and query optimization, iterating directly on hot-path endpoints after noticing user-facing lag.
- Adopted **Claude Code** daily as a core part of the workflow, using it to implement, debug, and refactor features while reviewing every AI-generated change before merge.
- Partnered with product and QA in **Agile** ceremonies and structured code reviews, translating ambiguous stakeholder asks into scoped, shippable increments.

Projects

Internal Workflow Automation Agent 2025 – 2026

- Developed an **LLM-based agent** on the **OpenAI API** that parses task requests and drafts **Jira** tickets, designing prompt templates and context-passing logic to handle model non-determinism.
- Connected agent output to downstream backend services, reducing manual coordination for real operational requests without a pre-defined spec.

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Picked up frontend work on a **React**/JavaScript UI without waiting for a formal design handoff, consuming REST/JSON APIs from **5+ Spring Boot** microservices.
- Containerized services with **Docker**, orchestrated via **Kubernetes**, and load-tested **1000+** simulated transactions end-to-end.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
