Sanskar Jain

Hyderabad, Telangana, India
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Backend engineer with 2+ years of experience building event-driven microservices and cloud-native APIs on AWS. Proficient in Python with hands-on experience in AWS Lambda, SNS, SQS, and API integration across distributed systems. Skilled in DevOps practices, CI/CD pipeline automation, and delivering production-grade systems end-to-end in Agile teams.

Skills

Languages: Python, C#, Java, TypeScript
Backend: REST APIs, ASP.NET Core, Spring Boot, Microservices, Kafka, Redis, Webhooks
Cloud & DevOps: AWS (Lambda, EC2, S3, SNS, SQS, CloudWatch, EKS, Lex), Docker, Kubernetes, CI/CD, Jenkins, Terraform, Linux
Databases: PostgreSQL, MongoDB, MySQL
Tools: Git, Azure DevOps, Postman, Swagger, Splunk, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Implemented **AWS Lambda** and **SNS** event pipelines with idempotent processing and retry/backoff handling, enabling reliable async integration between backend services with zero message loss under failure.
- Designed and shipped scalable **REST APIs** handling **200K+** weekly requests with structured error handling, input validation, and **Swagger**-documented contracts for reliable third-party and internal integration.
- Built **RulesRunner**, a server-side **SQS**-driven microservice that decoupled compliance logic from the client, cutting wait time by **83%** (3000ms → 500ms) and enabling independent scaling of backend workflows.
- Engineered backend integration for import/export of **30+** data types using async processing, **AWS S3** presigned URLs, and MongoDB, reducing data transfer time by **38%** and user-reported issues by **25%**.
- Automated **CI/CD** deployment pipelines with staged gates, parallel jobs, and automated test integration, cutting deployment time by **50%** and eliminating all manual release steps.
- Deployed and managed **AWS EC2**-hosted services with **CloudWatch** monitoring, maintaining high availability and real-time visibility into application and infrastructure health.
- Containerised microservices with **Docker** and orchestrated deployments with **Kubernetes**, ensuring consistent environments across dev, staging, and production.
- Improved API response time by **34%** via **Redis** caching, connection pooling, and targeted query optimisation on high-traffic endpoints.
- Reduced MTTR for production incidents by instrumenting services with structured logging and **Splunk** dashboards, surfacing error trends, latency spikes, and pipeline failures in real time.
- Continuously evaluated and adopted emerging technologies, migrating legacy services to modernised async patterns and tooling, cutting technical debt by **55%** and improving runtime performance by **30%**.
- Accelerated build and test cycle speed by **33%** through parallelised testing, build caching, and **CI/CD** pipeline optimisation, enabling the team to consistently ship **10+** features per quarter.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built a full-stack application with **5+** microservices using async **Kafka** communication; containerised all services with **Docker**, reducing local setup time by **60%**.
- Integrated **Kong API Gateway** for routing, load balancing, and authentication; simulated **1000+** end-to-end transactions across services.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Developed a stock advisory platform in **Python** using LSTM models for 30-day predictions; integrated Yahoo Finance API, Firebase, and deployed via **Streamlit**.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
