Sanskar Jain

Software Engineer | REST APIs & Data Integrations
Hyderabad, Telangana, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Software engineer with 2+ years of experience building REST APIs, data pipelines, and third-party/SaaS-style integrations in production. Proficient in Java (Spring Boot), Python, TypeScript, and C#/.NET, with a strong foundation in OOP, data structures, and clean API design. Hands-on experience debugging and optimizing async data pipelines for throughput and reliability, with a track record of shipping smaller features end-to-end from design to testing.

Key Skills

Languages: Java, Python, TypeScript, C#
APIs & Backend: REST APIs, JSON, Spring Boot, ASP.NET Core, Microservices, API Versioning, OOP & Design Principles
Data Pipelines & Integrations: Async data pipelines, third-party/SaaS integrations, Kafka, AWS SQS/SNS, S3, MongoDB, PostgreSQL
Tools & Practices: Docker, Kubernetes, Git, CI/CD (Azure DevOps), Unit/Integration Testing (xUnit, NUnit), Debugging & Profiling, Agile/Scrum

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Built and maintained REST API components with ASP.NET Core handling 200K+ weekly requests, focusing on clean implementation, input validation, structured error handling, and Swagger/OpenAPI documentation for testability.
- Implemented data pipeline integration for Xactimate's import/export across 30+ third-party data types using asynchronous processing, S3 presigned URLs, and MongoDB; debugged and optimized data flow, cutting transfer time by 38% and data issues by 25%.
- Co-designed RulesRunner, a stateless microservice applying CQRS and SQS-based async messaging, using OOP and design principles to reduce client wait time from 3000ms to 500ms (83%) while enabling horizontal scaling.
- Debugged and resolved integration issues across authentication flows (OAuth 2.0/Okta JWT via Kong Gateway) and caching layers (Redis/ElastiCache), improving API response time by 34%.
- Broke down and documented smaller feature tasks (service boundaries, API contracts, DLQ handling) and optimized MongoDB/PostgreSQL indexing by analyzing slow queries to improve pipeline query performance.
- Wrote unit and integration tests using xUnit/NUnit and participated in code reviews covering logic correctness, edge cases, and production readiness.

Projects

Expense Tracker – Microservices Application Aug 2023 – Dec 2023
Java, Spring Boot, Kafka, Docker, Kubernetes

- Built expense tracker backend using Java/Spring Boot with 5+ microservices, implementing REST API endpoints and asynchronous Kafka-based communication between services, routed through Kong API Gateway.
- Containerized services with Docker and orchestrated with Kubernetes, applying OOP design principles across service boundaries; simulated 1000+ transactions end-to-end for load testing.

Certifications

AWS Certified Cloud Practitioner – Amazon Web Services | Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 | 8.8 GPA
