Summary

Software engineer with 2+ years of experience designing and delivering cloud-native distributed systems, microservices, and data pipelines across multiple languages and platforms. Proficient in Java, C#, and Python with hands-on expertise in DevOps automation, cloud architectures, and testing & automation practices. Strong analytical and problem-solving skills with a security-first mindset; consistently ships reliable, high-quality solutions in collaborative Agile environments.

Skills

Languages: Java (Java 17), C#, Python, TypeScript
Backend & Systems: Spring Boot, ASP.NET Core, REST APIs, Microservices, Distributed Computing, Kafka, Redis
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda), CI/CD (Jenkins/Azure Pipelines), Docker, Kubernetes, Terraform
Databases: PostgreSQL, MySQL, MongoDB
Tools: Maven, Git, Bitbucket, Jira, Swagger, Postman, Splunk

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Designed and built **RulesRunner**, a distributed **microservice** consuming **SQS** messages to decouple compliance rules into an independently scalable component, reducing client wait time from **3000ms to 500ms** (**83%**) through solutions-oriented design.
- Engineered production REST APIs with a **security-first mindset** – structured error handling, strict input validation, OOP design patterns (SOLID), and **Swagger**-documented contracts ensuring API correctness across platforms.
- Built async **distributed** messaging pipelines using **AWS SNS**, Lambda, and S3 with idempotent processing and retry/backoff logic, eliminating message loss under failure and demonstrating cross-domain cloud architecture fluency.
- Improved API response time by **34%** via **Redis** distributed caching, connection pooling, and targeted query optimisation, sustaining **200K+ weekly requests** reliably at scale.
- Overhauled **DevOps** CI/CD pipelines (Jenkins/Azure DevOps) with staged gates, parallel jobs, and automated test integration, slashing deployment time by **50%** and eliminating all manual release steps.
- Delivered **85%+** unit and integration test coverage using **JUnit 5** and **Mockito**, accelerating build cycles by **33%** through **testing & automation** best practices and parallelised execution.
- Reduced mean time to diagnose production incidents by **40%** by instrumenting services with structured logging and **Splunk** dashboards, surfacing error trends and latency spikes in real time.

Projects

Expense Tracker – Full-Stack Distributed Microservices Aug 2023 – Dec 2023

- Designed a **full-stack** expense tracker using **Java 17** and **Spring Boot** with **5+** independently deployable microservices communicating via async **Kafka** topics, demonstrating distributed computing and microservices fluency.
- Modelled domain entities with **Spring Data JPA** and **Hibernate**, applying OOP principles and clean service layering to separate persistence, business logic, and API concerns.
- Integrated **Kong API Gateway** for routing, rate limiting, and token-based authentication; validated end-to-end with **1000+** simulated transactions.
- Containerised all services with **Docker** and Docker Compose, reducing environment setup time by **60%** and enabling consistent, reproducible multi-platform deployments.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Applied **cross-domain knowledge** to build a stock advisory platform using **Python** and **LSTM** models for 30-day price predictions, integrating Yahoo Finance API and **Firebase** for real-time data ingestion; deployed via **Streamlit** showcasing end-to-end pipeline design from ingestion to ML inference to presentation.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
