Summary

Full-stack software engineer with 2+ years of experience developing and evolving cloud-native platforms at Verisk Analytics. Proficient across the application stack – from RESTful backend services in **C#/.NET** and **Java** to front-end interfaces and API integrations. Brings a quality-first mindset, hands-on troubleshooting ability, and a track record of shipping reliable, well-documented software end-to-end.

Skills

Languages: C#, Java, Python, JavaScript
Backend: .NET 8, ASP.NET Core, Spring Boot, REST APIs, Microservices, Kafka, CQRS, API Versioning
Frontend: HTML, CSS, JavaScript, React (basic)
Cloud & DevOps: AWS (S3, SNS, SQS, Lambda, EKS), Docker, Kubernetes, CI/CD, Azure DevOps
Databases: MongoDB, PostgreSQL, MySQL, Query Optimisation
Quality & Tools: xUnit, NUnit, Swagger/OpenAPI, Splunk, OpenTelemetry, Jira, Code Reviews

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Designed and developed **RulesRunner**, a stateless microservice using **CQRS** and **AWS SQS** that offloaded compliance checks from the client, cutting response time from **3000ms to 500ms (83%)** and enabling independent scaling.
- Built **ASP.NET Core** REST APIs serving **200K+ weekly requests** with structured error handling, input validation, and **Swagger/OpenAPI** documentation, ensuring consistent contracts for front-end and third-party consumers.
- Engineered full-stack backend for **Xactimate's** import/export feature covering **30+ data types** using async processing, **S3 presigned URLs**, and **MongoDB**, reducing transfer time by **38%** and user-reported issues by **25%**.
- Improved API response time by **34%** via **Redis/ElastiCache** caching and query optimisation on high-traffic endpoints, directly enhancing platform user experience.
- Reviewed functional specifications and validation deliverables; authored technical design documents defining service contracts, DLQ handling, and **SNS** event publishing patterns for distributed teams.
- Implemented **URL-based API versioning** and **OAuth 2.0** with **Okta JWT** on **Kong Gateway**, maintaining backward compatibility and secure access across evolving platform versions.
- Wrote unit and integration tests with **xUnit/NUnit**; participated in structured code reviews covering architecture, edge cases, and production readiness, upholding quality standards across the team.
- Slashed deployment time by **50%** and build cycles by **33%** by overhauling **Azure DevOps** CI/CD pipelines with parallel jobs, staged gates, and automated test execution.
- Instrumented services with **OpenTelemetry** and **Splunk** dashboards, reducing mean time to diagnose production incidents and enabling proactive platform monitoring.
- Authored **production-safe migration scripts** with idempotent operations and backward compatibility, enabling zero-downtime deployments during platform upgrades.
- Migrated legacy services to **.NET 8** with modern async patterns, cutting technical debt by **55%** and improving runtime performance by **30%**.
- Troubleshot and resolved recurring production defects across backend services, analysing logs and trace data to identify root causes and apply durable fixes.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built a full-stack expense tracking application with a **React** front-end and **5+ Spring Boot** microservices, using async **Kafka** communication and **Kong API Gateway** for routing and authentication.
- Containerised all services with **Docker** and orchestrated deployments using **Kubernetes**; load-tested with **1000+ simulated transactions** to validate end-to-end reliability.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
