Sanskar Jain

Software Engineer — Java & OOP — Backend Systems
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Software engineer with 2+ years of experience building backend systems and REST APIs in Java and C#/.NET at Verisk Analytics. Strong foundation in object-oriented programming, data structures & algorithms, and design patterns (CQRS, Factory, Repository), applied to production-grade microservices. Comfortable with Git version control, Agile/Jira workflows, SQL databases, structured data formats (JSON/XML), and debugging production issues via logs on Linux/SSH environments.

Skills

Languages: Java 8+, C#, Python, TypeScript
Core CS: OOP, Data Structures & Algorithms, Design Patterns (CQRS, Factory, Repository, Singleton)
Backend & Frameworks: Spring Boot, Spring Framework, ASP.NET Core, .NET 8, REST APIs, Microservices, JSON, XML
Build, VCS & CI/CD: Maven, Git, Bitbucket, Azure DevOps, CI/CD Pipelines, Swagger/OpenAPI, Postman
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, Linux, SSH, Command-line Tools
Databases & Messaging: PostgreSQL, MySQL, MongoDB, SQL Queries, Apache Kafka, RabbitMQ, Redis
Practices & Tools: Agile/Scrum, Jira, Splunk (log analysis & debugging), Kong API Gateway

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Built **RulesRunner**, a multithreaded microservice applying the **CQRS design pattern** over **AWS SQS** that offloaded compliance checks from the client, reducing response latency from **3000ms to 500ms** (83% improvement) and enabling independent horizontal scaling.
- Designed and delivered production **REST APIs** handling **200K+ weekly requests** exchanging **JSON** payloads, with structured error handling, input validation, and **Swagger**-documented contracts, ensuring high availability and API stability.
- Diagnosed production issues via **Splunk** logs, worked **Agile/Scrum** sprints in **Jira**, and used **Git** (feature branching, PR reviews) for all code changes.
- Improved API response time by **34%** via **Redis** caching, connection pooling, and **SQL** query optimisation on high-traffic **PostgreSQL** endpoints.
- Engineered a scalable backend for import/export of **30+ data types** parsing and generating **JSON** and **XML** payloads via async processing, **AWS S3** presigned URLs, and **MongoDB**, reducing data transfer time by **38%** and user-reported issues by **25%**.
- Designed event-driven pipelines with **AWS SNS**, Lambda, and S3 featuring idempotent processing, retry/backoff strategies, and dead-letter queues for reliable asynchronous message delivery.
- Applied **data structures & algorithms** fundamentals to optimise hot-path logic while migrating legacy services to **.NET 8**, cutting technical debt by **55%** and improving runtime performance by **30%**.
- Slashed deployment time by **50%** by overhauling **CI/CD** pipelines with staged gates, parallel jobs, **Docker** containerisation, and automated test integration on **Linux/SSH**-accessible build agents.

Projects

Expense Tracker – Distributed Microservices Application Aug 2023 – Dec 2023

- Architected a cloud-native expense tracker using **Java/Spring Boot** with **5+ microservices**, built via **Maven**, and async **Kafka**-based inter-service communication with multithreaded consumers.
- Integrated **Kong API Gateway** for routing, load balancing, rate limiting, and service discovery; containerised all services with **Docker** and **Kubernetes**.
- Implemented **PostgreSQL**-backed persistence with optimised **SQL** queries and connection pooling; managed source control with **Git** across all services.
- Conducted load testing simulating **1000+** peak transactions end-to-end to validate throughput and identify bottlenecks pre-deployment.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
