# Sanskar Jain

Software Engineer | Java / Spring Boot | Microservices | CI/CD | Agile SDLC
Hyderabad, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

## Summary

Backend software engineer with 2+ years translating business requirements into stable enterprise application solutions using **Java**, **Spring Boot**, microservices, and **C#** across full **SDLC** in Agile teams at Verisk Analytics. Proven in implementing **CI/CD automation**, test-driven development, code reviews, and root cause analysis to ship reliable, maintainable software. Hands-on with **SQL/NoSQL** databases, Docker, Kubernetes, AWS, and exposure to **AI/ML** model development.

## Skills

**Backend:** Java, Spring Boot, Microservices, C#, .NET 8, ASP.NET Core, REST APIs, Kafka, Redis
**Frontend:** TypeScript, JavaScript, React.js, HTML/CSS, JSON
**Databases:** PostgreSQL, MySQL, SQL Server, MongoDB (NoSQL), Database Design
**DevOps & CI/CD:** Docker, Kubernetes (EKS/ECS), AWS (S3, SQS, SNS, Lambda), Azure DevOps, Terraform
**Practices:** TDD, SDLC, Agile/Scrum, Code Review, Root Cause Analysis, Technical Documentation

## Experience

**Verisk Analytics** Jan 2024 – Present
Software Engineer II Hyderabad, India

- Translated **business requirements and functional specifications** into logical program designs for Xactimate's import/export feature, delivering a scalable backend supporting **30+ data types** via async **C#**, **SQL**-backed pipelines, and AWS S3; reduced data transfer time by **38%** and user-reported issues by **25%**.
- Built **RulesRunner**, a **component-based microservice** decoupling compliance logic from the client using SQS and clean **C#** design patterns through iterative **SDLC**, reducing client wait time from **3000ms to 500ms** (**83%**).
- Developed and maintained **ASP.NET Core** REST APIs sustaining **200K+ weekly requests** with structured error handling, input validation, and **JSON** API contracts, solving difficult technical problems to ensure solutions are testable and maintainable.
- Implemented **CI/CD pipelines** via **Azure DevOps** with staged gates, parallel jobs, and **DevOps automation** tooling, cutting deployment time by **50%** and enforcing quality and efficiency in the delivery cycle.
- Applied **TDD** strategies with parallelised automated test suites and pipeline-integrated regression checks, accelerating build-and-test cycle by **33%** and enabling the team to ship **10+ features per quarter**.
- Conducted **root cause analysis** and **code reviews** to identify gaps, enforce architectural patterns, and maintain reference documentation, ensuring consistency and long-term stability across the engineering team.
- Ideated and published **reusable .NET libraries** and shared async patterns by migrating legacy services to **.NET 8**, reducing technical debt by **55%**, runtime overhead by **30%**, and improving productivity across teams.
- Improved **API response time by 34%** via **Redis** caching and **SQL query optimisation**; diagnosed and resolved **production issues** in real time using **Splunk** dashboards with structured logging across distributed services.

## Projects

**Expense Tracker – Full-Stack Enterprise Application** Aug 2023 – Dec 2023
Java, Spring Boot, Kafka, TypeScript, Docker, SQL/NoSQL, Kong API Gateway

- Designed **5+ Spring Boot microservices** with async **Kafka** communication, **SQL/NoSQL** persistence, and a **TypeScript/JavaScript** UI layer; containerised with **Docker** (60% faster setup), integrated **Kong API Gateway** for routing and auth, and simulated **1000+ transactions** end-to-end across full **SDLC**.

**Stock Recommendation and Prediction Platform** Apr 2022 – Jun 2022
Python, LSTM, AI/ML, Firebase, REST APIs, Streamlit

- Built an **AI/ML**-driven advisory platform using **Python** and **LSTM** models for 30-day stock predictions; integrated Yahoo Finance **REST API** and **Firebase** for real-time data ingestion, and deployed via Streamlit — independently shipped across the full **SDLC**.

## Certifications

**AWS Certified Cloud Practitioner** Amazon Web Services | Oct 2024

## Education

**B.Tech in Computer Engineering** — Vishwakarma Institute of Technology, Pune (SPPU) 2024 | CGPA: 8.8
