Sanskar Jain

Software Engineer | Java / Spring Boot | React | Microservices | CI/CD
Hyderabad, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Backend and full-stack software engineer with 2+ years of experience building Java Spring Boot microservices, REST APIs, and React-based applications in Agile teams at Verisk Analytics. Strong in data structures, analytical problem-solving, and database design across PostgreSQL, MySQL, and MongoDB. Hands-on with Docker, Kubernetes, CI/CD, monitoring, and load-balanced cloud deployments on AWS.

Skills

Languages: Java, JavaScript, TypeScript, C#, Python, SQL
Backend: Spring Boot, Spring Data JPA, Hibernate, REST APIs, Microservices, Kafka, Redis
Frontend: React, HTML5, CSS3, Bootstrap, JSON, REST API Integration
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, CI/CD, Azure DevOps, Terraform
Databases & Tools: PostgreSQL, MySQL, MongoDB, Git, Jenkins, Jira, Swagger, Postman, Splunk

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Built **RulesRunner**, an event-driven **Java Spring Boot** microservice using **AWS SQS**, reducing client wait time from **3000ms to 500ms** (**83%**) through async processing and scalable service design.
- Designed and maintained **REST APIs** handling **200K+ weekly requests** with structured error handling, validation, and Swagger-documented contracts, improving reliability and ownership across the stack.
- Engineered import/export workflows for **30+ data types** using async processing, **AWS S3** presigned URLs, and MongoDB, reducing transfer time by **38%** and user issues by **25%**.
- Improved API response time by **34%** through **Redis** caching, connection pooling, and targeted **SQL** query optimisation, using benchmarking to isolate hot-path bottlenecks.
- Reduced deployment time by **50%** by overhauling **CI/CD pipelines** in Azure DevOps with staged gates, parallel jobs, and automated tests; deployed containerised services with **Docker** and **Kubernetes** on AWS.
- Monitored production behaviour with structured logging and **Splunk** dashboards, surfacing latency spikes, error trends, and capacity signals for faster incident response and trend analysis.
- Troubleshot production incidents by reviewing logs, request patterns, and failed jobs with technical stakeholders, turning recurring defects into targeted fixes and clearer handoffs.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built a full-stack expense tracker using **Java Spring Boot** with **5+ microservices**, async **Kafka** messaging, and a **React** frontend with HTML/CSS for seamless UI integration.
- Containerised services with **Docker**, orchestrated with **Kubernetes**, and integrated **Kong API Gateway** for routing and load balancing; simulated **1000+ transactions** end-to-end.
- Modeled relational data with **PostgreSQL** and Spring Data JPA, applying database design and clean service layering to keep the system maintainable and testable.
- Kept the frontend and backend aligned through REST contract updates and UI validation, preserving a smooth developer workflow as features moved across the stack.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Developed a predictive stock advisory platform using Python and LSTM models for 30-day forecasts; integrated Yahoo Finance API and Firebase, then deployed with Streamlit.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
