Sanskar Jain

Backend Engineer | C#, Java, Python | Microservices, REST APIs & Cloud
Hyderabad, India | 9021620156 | sanskarjain0901@gmail.com | linkedin.com/in/sanskar-jain0901

Summary

Backend engineer with 2+ years designing and shipping production-grade REST APIs, microservices, and event-driven systems at Verisk Analytics. Proficient across relational and NoSQL databases, cloud infrastructure (AWS), and containerised deployments with Docker and Kubernetes. Collaborative, remote-friendly, and consistently delivering secure, scalable, well-tested backend systems in Agile teams.

Skills

Languages: C#, Java, Python, TypeScript
APIs & Backend: ASP.NET Core, Spring Boot, .NET 8, REST APIs, GraphQL, Microservices, Kafka, Redis
Security & Auth: JWT, OAuth2, input validation, structured error handling, API rate limiting
Cloud & Containers: AWS (S3, SNS, SQS, Lambda, EKS, ECS), Docker, Kubernetes, Terraform, CI/CD
Databases: MongoDB, PostgreSQL, MySQL (schema design, query optimisation, data modelling)
Tools: Azure DevOps, Swagger/OpenAPI, Splunk, Postman, Jira, Bitbucket

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II *Hyderabad, India*

- Designed and delivered production **ASP.NET Core** REST APIs serving **200K+** weekly requests, with **JWT**-based auth, input validation, structured error handling, and **Swagger/OpenAPI** contracts — owned end-to-end from design to deployment.
- Built **RulesRunner**, a decoupled microservice using **AWS SQS**, cutting client-side wait time from **3000ms to 500ms** (**83%**) by offloading compliance logic server-side for independent scaling.
- Engineered a scalable import/export backend for **30+** data types using async processing, **AWS S3** presigned URLs, and **MongoDB** data modelling, reducing transfer time by **38%** and user-reported issues by **25%**.
- Improved API **p95 latency by 34%** through **Redis**/ElastiCache caching, connection pooling, and hot-path query optimisation across **PostgreSQL** and **MongoDB** datastores.
- Implemented **event-driven** and **serverless** pipelines using **AWS SNS + Lambda + S3** with idempotent processing and retry/backoff, eliminating message loss under failure conditions.
- Accelerated CI/CD by **50%** overhauling **Azure DevOps** pipelines with staged gates, parallel jobs, and automated test integration; boosted build/test cycle speed by **33%** via parallelised testing and caching.
- Cut technical debt by **55%** and improved runtime performance by **30%** leading migration of legacy services to **.NET 8** with modernised DI, async patterns, and SDK tooling.
- Instrumented services with structured logging and **Splunk** dashboards, surfacing error trends and latency spikes to reduce mean time to diagnose production incidents.

Projects

Expense Tracker — Microservices Platform Aug 2023 – Dec 2023
Java, Spring Boot, Kafka, Docker, PostgreSQL, Kong API Gateway

- Architected a distributed expense tracker with **5+ Java**/Spring Boot microservices communicating via async **Kafka** events; enforced **authentication and routing** through **Kong API Gateway**.
- Containerised all services with **Docker**, cutting environment setup time by **60%**; simulated **1000+** end-to-end transactions to validate data consistency and service contracts.

Stock Recommendation and Prediction Apr 2022 – Jun 2022
Python, LSTM, MySQL, Firebase, Streamlit

- Built a stock advisory platform using **Python** and LSTM models for 30-day predictions; integrated Yahoo Finance API and **Firebase** auth, deployed via Streamlit.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

B.Tech in Computer Engineering, Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 | 8.8 GPA
