Sanskar Jain

Software Engineer — Java, Microservices & Cloud-Native AWS
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Software engineer with 2+ years of experience designing and delivering cloud-native microservices and distributed systems on AWS at Verisk Analytics. Proficient in Java and C# with a strong grounding in scalability, performance optimisation, availability engineering, and automation. Experienced in end-to-end software design and architecture, applying programming best practices to solve complex analytical problems in Agile teams.

Skills

Languages: Java, C#, Python, TypeScript
Backend: Spring Boot, .NET 8, ASP.NET Core, REST APIs, GraphQL, Microservices, Kafka, Redis
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, ECS, Lambda), Docker, Kubernetes, Terraform, CI/CD, Azure DevOps
Databases: MongoDB, PostgreSQL, MySQL
Tools: Jira, Confluence, Bitbucket, Git, Swagger, Postman, Splunk

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Designed and built **cloud-native microservices** on **AWS** for **Xactimate**, a large-scale SaaS platform, applying software architecture best practices around scalability, availability, and performance to serve **200K+** weekly requests.
- Engineered **RulesRunner**, a distributed microservice using **AWS SQS** that offloaded compliance checks from the client, reducing wait time from **3000ms to 500ms** (**83%**) through async processing and decoupled event-driven design.
- Built a scalable backend for import/export of **30+ data types** using async processing, **AWS S3** presigned URLs, and MongoDB, solving complex data-pipeline performance challenges and reducing transfer time by **38%**.
- Cut technical debt by **55%** and improved runtime performance by **30%** by migrating legacy services to **.NET 8**, applying modern dependency injection, async patterns, and virtualisation via **Docker** and **Kubernetes**.
- Eliminated message loss under failure conditions by architecting **AWS SNS**, Lambda, and S3 event-driven pipelines with idempotent processing, retry/backoff strategies, and fault-tolerant design for reliable async delivery.
- Improved API response time by **34%** through **Redis**/ElastiCache caching, connection pooling, and targeted query optimisation — applying analytical profiling to identify and resolve hot-path bottlenecks.
- Slashed deployment time by **50%** by overhauling **CI/CD pipelines** with staged gates, parallel jobs, and automated test integration, eliminating manual release steps and enforcing automation best practices.
- Containerised and orchestrated services using **Docker** and **Kubernetes** on **AWS EKS**, managing deployments, scaling policies, and health checks to maintain high availability across production environments.
- Tracked and resolved bugs using **Jira** with structured sprint workflows; maintained system documentation and architectural decision records in **Confluence** wikis for cross-team knowledge sharing.
- Reduced MTTR by instrumenting services with structured logging and **Splunk** dashboards, surfacing error trends, latency spikes, and pipeline failures in real time for proactive incident response.
- Accelerated build and test cycle by **33%** through parallelised automated testing, build caching, and pipeline optimisation, enforcing testing best practices and enabling consistent delivery of **10+ features per quarter**.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built full-stack application using **Java Spring Boot** with **5+** microservices, async **Kafka** messaging, **Docker**, and **Kong API Gateway**; simulated **1000+** transactions end-to-end to validate scalability and performance.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
