Summary

Backend engineer with 2+ years designing and taking end-to-end ownership of distributed systems and async architectures at Verisk Analytics. Proven ability to turn ambiguous problems into pragmatic production solutions that balance performance, reliability, and long-term maintainability. Thrives in fast-paced, cross-functional teams; bias toward action, clear tradeoff thinking, and a growing curiosity for applying AI tools to engineering problems.

Skills

Languages: C#, Python, Java, TypeScript
Backend: .NET 8, ASP.NET Core, REST APIs, Microservices, Kafka, Redis, Async Pipelines
Distributed Systems: AWS SQS, SNS, Lambda, Event-driven Architectures, Idempotency, Async Task Processing
Cloud & DevOps: AWS (S3, EKS, ECS), Docker, Kubernetes, Terraform, CI/CD
Databases: PostgreSQL, MySQL, MongoDB
Tools: xUnit, Postman, Swagger, Splunk, Jira, Bitbucket

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Designed and owned **RulesRunner**, an async task-offloading microservice on **AWS SQS** that decoupled compliance processing from client threads — taking an ambiguous performance problem to a production solution that cut wait time from **3000ms to 500ms** (**83%**).
- Architected fault-tolerant async pipelines on **AWS SNS**, Lambda, and S3 with idempotent processing and retry/backoff, eliminating message loss and ensuring reliable delivery under partial failure across distributed workflows.
- Built **ASP.NET Core** REST APIs serving **200K+** weekly requests with structured error handling, input validation, and **Swagger**-documented contracts, maintaining high reliability and clear end-to-end ownership.
- Improved API response time by **34%** by introducing **Redis** caching with deliberate TTL-based invalidation, making explicit consistency-vs-latency tradeoffs on hot-path endpoints under production load.
- Cut technical debt by **55%** migrating legacy services to **.NET 8** with modernised async patterns; prioritised high-impact changes to maximise team velocity without sacrificing long-term maintainability.
- Accelerated **xUnit** test cycle by **33%** through parallelised testing and build caching; slashed deployment time by **50%** via overhauled **CI/CD** pipelines, enabling the team to ship **10+** features per quarter.
- Reduced mean time to diagnose incidents by instrumenting **Kubernetes**-deployed services with structured logging and **Splunk** dashboards, surfacing latency spikes and async pipeline failures in real time.
- Led code reviews and collaborated cross-functionally to unblock engineers, enforce clean extensible design, and align backend implementations with product requirements across Agile sprints.

Projects

Expense Tracker – Distributed Microservices Application Aug 2023 – Dec 2023

- Owned architecture end-to-end across **5+** microservices with async **Kafka** communication, **Kong API Gateway** for routing and auth, and **Docker** containerisation; stress-tested with **1000+** simulated transactions.
- Designed data layer using **PostgreSQL** for transactional consistency and **MongoDB** for activity logs; wrote unit and integration tests achieving **80%+** coverage, balancing correctness with development velocity.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Built stock advisory platform in **Python** using LSTM models for 30-day price predictions; applied text processing and time-series forecasting pipelines, demonstrating hands-on curiosity in AI-driven features and data engineering.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
