Summary

Software engineer with 2+ years of production experience in **C#/.NET Core** and cloud-native microservices at Verisk Analytics, a regulated data and analytics company. Hands-on with **AWS** (EKS/ECS, Lambda, S3, SQS/SNS, ElastiCache) and **Azure DevOps**; designed highly scalable REST APIs, async event pipelines, and containerised services with Docker and Kubernetes. Strong background in **NoSQL** databases, distributed systems, and unit/integration testing with a track record of measurable performance improvements.

Skills

Languages: C#, Java, Python, TypeScript
Backend: .NET Core / .NET 8, ASP.NET Core, REST APIs, Microservices, CQRS, Event-Driven Architecture, Kafka, API Versioning
Frontend: Angular (basic), React (basic), TypeScript, HTML/CSS
Cloud & Infrastructure: AWS (EKS, ECS, AKS-equivalent, Lambda/Function App, S3/Azure Storage, SQS/Service Bus, SNS/Event Hubs, IAM, ElastiCache), Azure DevOps, Terraform, CI/CD
Databases: MongoDB, Cosmos DB (NoSQL document model), PostgreSQL, MySQL, Redis, Indexing, Query Optimisation
Containers & Orchestration: Docker, Kubernetes (EKS/AKS), Kong API Gateway
Security: OAuth 2.0, JWT, Okta, Application Gateway patterns
Testing & Tooling: xUnit, NUnit, Swagger/OpenAPI, OpenTelemetry, Splunk, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Designed and delivered **RulesRunner**, a stateless compliance microservice using **CQRS**, **SQS** (Service Bus equivalent) for command dispatch, and SNS event publishing — reducing wait time from **3000ms to 500ms (83%)** with horizontal scaling on **EKS**.
- Engineered scalable backend for **Xactimate's** import/export of **30+ data types** using async processing, **S3 presigned URLs**, and **MongoDB** (document NoSQL), reducing transfer time by **38%** and defect rate by **25%**.
- Built **ASP.NET Core** REST APIs handling **200K+ weekly requests** with structured error handling, input validation, URL-based versioning, and **Swagger/OpenAPI** contracts.
- Architected event-driven async pipelines using **AWS Lambda** (Function App equivalent) with idempotent processing, retry/backoff strategies, and DLQ handling — ensuring zero message loss under failure.
- Established **OAuth 2.0** on **AWS EKS** behind **Kong Gateway** (Application Gateway pattern), integrating **Okta JWT** tokens with Identity Server for secure cross-service authorisation.
- Improved API response time by **34%** via **Redis/ElastiCache** caching, connection pooling, and query optimisation; optimised **MongoDB** and **PostgreSQL** indexing from slow-query analysis.
- Authored technical design documents defining service boundaries, API contracts, and distributed event-handling patterns across **6+ microservices**.
- Wrote **unit and integration tests** using **xUnit/NUnit**; incorporated automated test suites into **Azure DevOps** CI/CD pipelines with staged gates and parallel jobs, cutting deployment time by **50%**.
- Migrated legacy services to **.NET 8** with modern async patterns, reducing technical debt by **55%** and improving runtime performance by **30%**.
- Instrumented services with **OpenTelemetry** tracing and **Splunk** dashboards for monitoring and incident diagnosis; authored production-safe migration scripts with backward compatibility.

Projects

Expense Tracker – Microservices Application Aug 2023 – Dec 2023

- Built cloud-native expense tracker with **5+ Spring Boot** microservices, async **Kafka** messaging, **Kong API Gateway**, Docker, and Kubernetes; simulated **1000+ transactions** for load and functional testing.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
