Sanskar Jain

Full-Stack Software Engineer | AI-Native Development | Distributed Systems
Hyderabad, Telangana, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Full-stack software engineer with 2+ years of experience owning backend systems, REST APIs, and full-stack features end-to-end at Verisk Analytics, using Claude Code daily as the primary driver for feature development, debugging, and code review. Also built production LLM-powered internal agents via direct API integration and prompt engineering. Comfortable working across the stack (Spring Boot/ASP.NET Core backends, React frontends, PostgreSQL/MongoDB), decomposing engineering work for AI-assisted execution, and verifying AI-generated code for correctness and maintainability. Resourceful in ambiguous environments with strong systems thinking and end-to-end ownership.

Key Skills

AI-Native Development: Claude Code (daily driver), LLM API integration (OpenAI), prompt engineering, agent orchestration, task decomposition for AI-assisted coding, AI-generated code review
Languages & Frameworks: Python, Java, TypeScript, C#, Spring Boot, ASP.NET Core, React
Backend & Architecture: REST APIs, system design, microservices, distributed systems, event-driven architecture, API design
Data & Cloud: PostgreSQL, MongoDB, AWS (S3, SQS, SNS, Lambda, EKS), Docker, Kubernetes, CI/CD, Terraform

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Use Claude Code daily as the primary development environment, directing it to implement, debug, and refactor backend features while reviewing generated code for correctness, security, and maintainability before merge.
- Built and shipped an internal LLM-powered workflow agent (Python, OpenAI API) end-to-end, using prompt engineering and custom orchestration logic to automate Jira ticket creation and task routing, reducing manual coordination effort for the team.
- Owned feature delivery end-to-end for RulesRunner, a stateless microservice using CQRS and SQS that offloaded compliance checks from the client, reducing wait time from 3000ms to 500ms (83%) while enabling horizontal scaling.
- Designed and built ASP.NET Core REST APIs handling 200K+ weekly requests, decomposing feature work into clear, testable units with structured error handling, input validation, and Swagger/OpenAPI documentation.
- Engineered end-to-end data integration for Xactimate's import/export across 30+ data types using async processing, S3 presigned URLs, and PostgreSQL/MongoDB, reducing transfer time by 38% and issues by 25%.
- Improved API response time by 34% via Redis/ElastiCache caching and query optimization; set standards for code quality through structured code reviews covering architecture, edge cases, and production readiness.

Projects

Internal Workflow Automation Agent 2025 – 2026
Python, OpenAI API, Prompt Engineering

- Designed and built an AI agent using direct OpenAI API integration with custom prompt engineering and orchestration logic, decomposing the problem into agent tasks to automate Jira ticket creation and cross-team task routing.

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023
Java, Spring Boot, React, PostgreSQL

- Built a full-stack expense tracker using Java/Spring Boot with 5+ microservices, a React frontend with HTML/CSS backed by PostgreSQL, and Kong API Gateway routing, containerized with Docker/Kubernetes.

Certifications

AWS Certified Cloud Practitioner – Amazon Web Services | Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 | 8.8 GPA
