Sanskar Jain

Software Engineer | CI/CD Infrastructure | Software Architecture | Cross-Platform Development
Hyderabad, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Backend software engineer with 2+ years at Verisk Analytics owning end-to-end development workflows across CI/CD infrastructure, microservices architecture, and cross-platform deployment on Windows and macOS. Proven in establishing code quality standards, conducting architectural assessments, and enabling teams to ship **10+ features per quarter** through automated pipelines and best practices. Hands-on with GitHub Actions, Docker, Kubernetes, and AWS; experienced in code reviews, peer mentoring, and championing engineering excellence in Agile teams.

Skills

CI/CD & Dev Infrastructure: GitHub Actions, Azure DevOps, Docker, Kubernetes (EKS/ECS), Terraform, AWS (S3, SNS, SQS, Lambda)
Architecture & Backend: .NET 8, ASP.NET Core, Spring Boot, REST APIs, Microservices, Kafka, Redis
Platforms: Windows, macOS, Linux (containerised), Cross-Platform Deployment
Languages: C#, Java, Python, TypeScript
Tools & Practices: Code Review, Architectural Assessment, Swagger, Splunk, Postman, Jira, Agile/Scrum

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Led end-to-end overhaul of **CI/CD pipelines** using **Azure DevOps** and **GitHub Actions** with staged deployment gates, parallel jobs, and automated test integration, cutting release time by **50%** and eliminating all manual steps.
- Established and enforced **code quality standards**, architectural patterns, and PR review guidelines across engineering teams through systematic **code reviews** and shared design documentation, ensuring scalability and consistency.
- Drove adoption of **modern development methodologies** by migrating legacy services to **.NET 8**, reducing technical debt by **55%** and runtime overhead by **30%**; shared migration guides and async patterns to upskill peers.
- Architected **RulesRunner**, a decoupled **SQS**-backed microservice that offloaded compliance logic from the client, reducing wait time from **3000ms to 500ms** (**83%**) and setting a reusable async pattern adopted across workflows.
- Owned **end-to-end development lifecycle** for Xactimate's import/export feature — from architecture and implementation through deployment and monitoring — supporting **30+ data types**; reduced user-reported issues by **25%**.
- Proactively identified and mitigated **technical risks** by instrumenting services with structured logging and **Splunk** dashboards, surfacing latency spikes and error trends before production escalation.
- **Containerised** cross-platform services with **Docker** and orchestrated deployments on **Kubernetes (EKS/ECS)**, ensuring consistent, reproducible builds across **Windows and macOS** developer environments through to production.
- Built **ASP.NET Core** REST APIs sustaining **200K+ weekly requests**; accelerated build-and-test cycle by **33%** via parallelised testing and build caching, enabling the team to ship reliably at scale.
- Improved **API response time by 34%** via **Redis** caching and query optimisation; eliminated message loss by designing **AWS SNS**/Lambda pipelines with idempotent processing and retry/backoff handling.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023
Spring Boot, C#/.NET, Kafka, TypeScript, Docker, Kong API Gateway

- Designed **software architecture** for 5+ microservices with async **Kafka** communication; enforced **code quality standards** and architectural patterns across the service mesh, simulating **1000+ end-to-end transactions**.
- **Containerised** all services with **Docker** (60% faster local setup), integrated **Kong API Gateway** for routing, load balancing, and auth — demonstrating cross-platform development from architecture through deployment.
- Built a **TypeScript** frontend consuming REST APIs and configured **CI/CD** workflows, championing development best practices and environment consistency across **Windows and macOS** developer machines.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

B.Tech in Computer Engineering — Vishwakarma Institute of Technology, Pune (SPPU) 2024 | CGPA: 8.8
