Summary

C# and .NET backend engineer with 2+ years shipping cloud-native APIs and distributed microservices at Verisk Analytics, a global SaaS analytics platform. Deep expertise in .NET 8, ASP.NET Core, PostgreSQL, Kafka, and AWS, with a strong focus on clean, well-tested, and extensible code. Experienced collaborating with cross-functional Agile teams to deliver scalable SaaS features end-to-end, from design through CI/CD deployment.

Skills

Languages: C#, Python, Java, TypeScript
Backend: .NET 8, ASP.NET Core, REST APIs, Microservices, Kafka, Redis, GraphQL
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, ECS, Lambda), Docker, Kubernetes, Terraform, CI/CD
Databases: PostgreSQL, MySQL, MongoDB
Tools: xUnit, Azure DevOps, Postman, Swagger, Splunk, Jira, Bitbucket

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Engineered a scalable **SaaS** backend for **Xactimate's** import/export of **30+** data types using async processing, **AWS S3** presigned URLs, and **PostgreSQL**/MongoDB, reducing data transfer time by **38%** and user-reported issues by **25%**.
- Built **ASP.NET Core** REST APIs serving **200K+** weekly requests with structured error handling, input validation, and **Swagger**-documented contracts; improved response time by **34%** via **Redis** caching and query optimisation.
- Designed **RulesRunner**, a distributed microservice on **AWS SQS** that offloaded estimate compliance checks from the client, cutting wait time from **3000ms to 500ms** (**83%**) and decoupling rules logic for independent scaling.
- Cut technical debt by **55%** migrating legacy services to **.NET 8** with modernised dependency injection and async patterns; led code reviews enforcing clean, extensible **OOP** design and **SOLID** principles.
- Accelerated build and test cycle speed by **33%** through parallelised **xUnit** testing, build caching, and pipeline optimisation, enabling the team to consistently ship **10+** features per quarter.
- Partnered with product and QA in Agile **Jira** sprints to translate business requirements into well-scoped backend tasks, driving **4+ releases** per quarter with full traceability from ticket to deployment.
- Slashed deployment time by **50%** by overhauling **CI/CD** pipelines with staged gates, parallel jobs, and automated test integration, provisioning infrastructure via **Terraform**.
- Designed fault-tolerant **AWS SNS**, Lambda, and S3 async pipelines with idempotent processing and retry/backoff logic, eliminating message loss across distributed **Kafka**-driven workflows.
- Reduced mean time to diagnose production incidents by instrumenting **Kubernetes**-deployed services with structured logging and **Splunk** dashboards, surfacing latency spikes and pipeline failures in real time.

Projects

Expense Tracker – Distributed Microservices Application Aug 2023 – Dec 2023

- Built a distributed expense tracker with **Spring Boot**, **5+** microservices, and async **Kafka** communication; integrated **Kong API Gateway** for routing, load balancing, and auth; containerised with **Docker** and simulated **1000+** transactions end-to-end.
- Designed the data layer using **PostgreSQL** for transactional records and **MongoDB** for activity logs; wrote unit and integration tests achieving **80%+** coverage across all services.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Built stock advisory platform in **Python** using LSTM models for 30-day price predictions; applied text processing and time-series data pipelines, integrated Yahoo Finance API, and deployed via Streamlit.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
