Summary

Full-stack engineer with 2+ years building cloud-native microservices and high-throughput REST APIs at Verisk Analytics. Hands-on with **Java, Spring Boot, AWS** (EC2, Lambda, S3, ECS, CloudWatch), and async messaging via **Kafka**. Delivered production systems end-to-end with strong ownership: OAuth 2.0 security, CI/CD automation, and observability.

Skills

Languages: Java, C#, TypeScript, Python
Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, ASP.NET Core, REST APIs, Microservices
Frontend: TypeScript, HTML5, CSS3, Angular (basics), Responsive UI
Cloud & DevOps: AWS (EC2, Lambda, S3, RDS, ECR, ECS, SQS, SNS, ElastiCache, CloudWatch, API Gateway), Docker, Kubernetes, Terraform, GitLab CI/CD, Azure DevOps
Messaging: Kafka, SQS, SNS
Security: OAuth 2.0, JWT, IAM, Okta, Kong Gateway
Databases: PostgreSQL, MySQL, MongoDB, Indexing, Query Optimization
Testing & Tools: JUnit, xUnit, NUnit, Maven, Swagger/OpenAPI, OpenTelemetry, Splunk, Grafana, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Co-designed **RulesRunner**, a stateless microservice using **CQRS**, **SQS**, and **Spring Boot**-style async processing, reducing compliance-check wait time from **3000ms to 500ms (83%)** and enabling horizontal scaling.
- Authored technical design documentation defining microservice boundaries, API contracts, DLQ handling, and **SNS**-based event publishing patterns for distributed consumers.
- Architected event-driven architecture with idempotent **Kafka/SQS** processing, retry/backoff strategies, and **AWS Lambda** pipelines ensuring zero message loss under failure conditions.
- Engineered scalable backend for **Xactimate's** import/export of **30+ data types** using async processing, **S3 presigned URLs**, and **MongoDB**, reducing transfer time by **38%** and defect rate by **25%**.
- Built **REST APIs** handling **200K+ weekly requests** with structured error handling, input validation, and **Swagger/OpenAPI** documentation using **Spring MVC** patterns.
- Established **OAuth 2.0** authentication on **AWS ECS/EKS** behind **Kong API Gateway**, integrating **Okta JWT tokens** and **IAM role**-based access control for secure cross-service authorization.
- Improved API response time by **34%** via **ElastiCache** caching, connection pooling, and hot-path query optimisation.
- Optimised **database indexing strategies** on **PostgreSQL** and **MySQL** via AWS **RDS**, analysing slow queries and access patterns to boost throughput.
- Authored **production-safe migration scripts** with idempotent operations and backward compatibility enabling zero-downtime deployments.
- Slashed deployment time by **50%** and build cycles by **33%** by overhauling **GitLab/Azure DevOps CI/CD** pipelines with staged gates, parallel jobs, and automated testing.
- Instrumented services with **OpenTelemetry** tracing and **CloudWatch/Grafana** dashboards, reducing mean time to diagnose production incidents.
- Wrote unit and integration tests using **JUnit/xUnit**; participated in structured **Agile/Scrum** code reviews covering architecture, edge cases, and production readiness.

Projects

Expense Tracker – Microservices Application Aug 2023 – Dec 2023

- Built expense tracker with **5+ Spring Boot microservices**, async **Kafka** communication, **Spring Security** with JWT, and **Kong API Gateway** for routing and auth; managed dependencies with **Maven**.
- Containerised all services with **Docker** and orchestrated deployments using **Kubernetes**; implemented **PostgreSQL** with optimised **Spring Data JPA** queries; simulated **1000+ transactions** for load testing.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
