Sanskar Jain

Hyderabad, Telangana, India
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Backend engineer with 2+ years of experience shipping production APIs, cloud integrations, and automation pipelines at Verisk Analytics. Proficient in **Python**, **REST API integration**, and deploying third-party platforms on **AWS** using cost-efficient, open-source tooling. Pragmatic builder with a strong bias for working solutions – experienced integrating external services, automating workflows, and delivering end-to-end systems with full ownership.

Skills

Languages: Python, C#, Java
AI & Integrations: REST API Integration, Webhook Pipelines, Third-Party Platform Deployment, Async Event Processing
Web & Backend: ASP.NET Core, Spring Boot, REST APIs, Microservices, Kong API Gateway, OAuth 2.0, JWT
Cloud & DevOps: AWS (Lambda, S3, SQS, SNS, EKS, ECS, ElastiCache), Docker, Kubernetes, Terraform, CI/CD
Databases & Storage: MongoDB, PostgreSQL, MySQL, Redis, Query Optimisation
Tools & Observability: GitHub, OpenTelemetry, Splunk, Swagger/OpenAPI, Azure DevOps, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Built and deployed **REST APIs** handling **200K+ weekly requests**, integrating third-party services with structured error handling, retries, and **Swagger/OpenAPI** contracts – shipped end-to-end with full ownership.
- Engineered **event-driven automation pipelines** on **AWS Lambda** and **SQS/SNS** with idempotent processing, retry/backoff, and DLQ handling for reliable third-party service orchestration.
- Designed **RulesRunner**, a stateless microservice decoupling compliance logic from clients via **CQRS** and async queuing, reducing latency by **83%** (3000ms → 500ms) with horizontal scalability.
- Built large-scale async data pipeline for **Xactimate** integrating **30+ external data types** via **S3 presigned URLs** and **MongoDB**, cutting transfer time **38%** and data issues **25%**.
- Integrated **OAuth 2.0 / JWT** with **Okta** on **Kong API Gateway** to enable secure, token-based access across distributed services – reusable pattern adopted across multiple teams.
- Improved hot-path response time by **34%** through **Redis** caching and **PostgreSQL / MongoDB** query optimisation on high-traffic endpoints.
- Accelerated deployment cycles by **50%** by overhauling **Azure DevOps** CI/CD pipelines with parallel jobs, staged gates, and automated tests – leveraging open-source tooling throughout.
- Authored **production-safe, idempotent migration scripts** enabling zero-downtime schema deployments; instrumented services with **OpenTelemetry** and **Splunk** for end-to-end observability.

Projects

AI Chatbot Integration Prototype – Python & Webhook Automation 2025

- Built a **Python**-based prototype integrating **LLM APIs** (OpenAI-compatible) to automate conversational workflows, processing webhook events and routing responses to downstream services.
- Designed prompt engineering templates and API orchestration layer to serve structured responses – deployed on **AWS Lambda** for serverless, cost-efficient operation.

Kafka-Driven Expense Tracker – Microservices Platform Aug 2023 – Dec 2023

- Built **5+ Java microservices** with async **Kafka** messaging and **Kong API Gateway**; containerised with **Docker** and orchestrated via **Kubernetes**, load-tested at **1000+ concurrent transactions**.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
