Summary

Backend engineer with 2.5+ years of experience building distributed, enterprise-grade systems using **C#/.NET 8** and **AWS**. Specialised in real-time event-driven messaging, microservices, and high-throughput REST APIs running on **Kubernetes**. Delivered production systems end-to-end with strong ownership: reduced latency by 83%, cut deployment time by 50%, and ensured zero message loss under failure.

Skills

Languages: C#, Java, Python
Backend: .NET 8, ASP.NET Core, REST APIs, Microservices, Kafka, SQS/SNS, Redis, CQRS, API Versioning
Frontend: React, HTML/CSS
Cloud & DevOps: AWS (EKS, ECS, S3, SQS, SNS, Lambda, ElastiCache), Docker, Kubernetes, Terraform, TeamCity, CI/CD, Linux
Security: OAuth 2.0, JWT, Okta, Kong Gateway
Databases: MongoDB, PostgreSQL, MySQL, Indexing, Query Optimization
Testing & Tools: xUnit, NUnit, Azure DevOps CI/CD, Swagger/OpenAPI, Splunk, OpenTelemetry, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Co-designed **RulesRunner**, a stateless microservice using **CQRS** and **SQS** for distributed compliance processing, reducing wait time from **3000ms to 500ms (83%)** and enabling horizontal scaling via queue-based load levelling.
- Architected event-driven pipelines with idempotent processing, retry/backoff strategies, and **AWS Lambda**, ensuring **zero message loss** under partial failure – aligned with enterprise distributed messaging patterns.
- Built **ASP.NET Core** REST APIs handling **200K+ weekly requests** with structured error handling, input validation, and full **Swagger/OpenAPI** documentation; applied URL-based versioning for backward-compatible client migrations.
- Established **OAuth 2.0** authentication on **AWS EKS** behind **Kong Gateway**, integrating **Okta JWT** with Identity Server for secure cross-service authorisation on Kubernetes-managed workloads.
- Engineered scalable backend for **Xactimate's** import/export of **30+ data types** using async pipelines, **S3 presigned URLs**, and **MongoDB**, reducing transfer time by **38%** and error rate by **25%**.
- Improved API response time by **34%** via **Redis/ElastiCache** caching and connection pooling on hot-path endpoints under sustained load.
- Overhauled **TeamCity** and Azure DevOps CI/CD pipelines with staged gates, parallel jobs, and automated testing; slashed deployment time by **50%** and build cycles by **33%** across Linux-based EKS/ECS environments.
- Migrated legacy services to **.NET 8** with modern async/await patterns, cutting technical debt by **55%** and improving runtime throughput by **30%**.
- Instrumented services with **OpenTelemetry** distributed tracing and **Splunk** dashboards; reduced mean time to diagnose production incidents across containerised microservices.

Projects

Expense Tracker – Microservices Application Aug 2023 – Dec 2023

- Built a full-stack expense tracker with a **React** frontend and **5+ Spring Boot** microservices communicating over async **Kafka** topics, with **Kong API Gateway** handling routing and auth.
- Containerised all services with **Docker** and orchestrated via **Kubernetes**; simulated **1000+ concurrent transactions** end-to-end for load and failure-mode testing.

Stock Recommendation and Prediction Platform Apr 2022 – Jun 2022

- Built a stock price advisory platform in **Python** using **LSTM** models for 30-day forecasts; ingested live market data via **Yahoo Finance API**, deployed via **Streamlit** with **Firebase** – demonstrating applied knowledge of financial data pipelines and time-series analysis.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
