Summary

Backend engineer with 2+ years of hands-on experience designing, building, and operating production backend systems in **Go** at Verisk Analytics. Strong foundation in microservices, event-driven architecture (**Kafka**, **SQS**), REST API design, and **AWS** cloud engineering, with proven ownership of scalability, latency, and reliability trade-offs. Comfortable operating production systems end-to-end – monitoring, incident response, and continuous performance improvement – across SQL and NoSQL data stores.

Skills

Languages: Go (Golang), C#, Java, Python, TypeScript (familiar)
Backend & Architecture: Microservices, Event-Driven Systems, REST APIs, Kafka, AWS SQS, CQRS, API Versioning, Node.js (familiar)
Cloud: AWS (EKS, ECS, Lambda, S3, SNS, SQS, ElastiCache), Docker, Kubernetes, Terraform, CI/CD, Azure DevOps
Databases: PostgreSQL, MySQL, MongoDB, DynamoDB (NoSQL), Redis, Schema Design, Query Optimisation
Production & Observability: OpenTelemetry, Grafana, Splunk, On-Call Rotation, Incident Response, Performance Tuning
Security & Tools: OAuth 2.0, JWT, Okta, Kong Gateway, Swagger/OpenAPI, xUnit/NUnit, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Co-designed and built **RulesRunner**, a stateless backend service in **Go** using **CQRS** and **AWS SQS** to offload compliance checks from clients, cutting response latency from **3000ms to 500ms (83%)** and enabling horizontal scaling.
- Engineered event-driven pipelines with **Kafka** and **AWS SNS**, adding idempotent message handling, retry/backoff strategies, and dead-letter queues that guaranteed zero message loss under failure conditions.
- Built and maintained production APIs in **Go** and **ASP.NET Core** serving **200K+ weekly requests**, with structured error handling, input validation, and Swagger/OpenAPI-documented contracts.
- Shipped a scalable backend for **Xactimate's** import/export of **30+ data types** using async **Lambda** pipelines and **S3** presigned URLs, cutting transfer time **38%** and defects **25%**.
- Ran services on **AWS EKS/ECS** with **Docker** and **Kubernetes**, supporting rolling, zero-downtime deployments and horizontal autoscaling for latency-sensitive workloads.
- Optimised **PostgreSQL** and **MongoDB** schema design and indexing, and introduced **Redis**/**DynamoDB** for hot-path caching and key-value storage, lifting API response time **34%**.
- Took end-to-end ownership of production systems: on-call rotation, incident triage, and root-cause fixes, instrumented with **OpenTelemetry** tracing and **Grafana**/**Splunk** dashboards to shrink mean time to detect.
- Secured cross-service calls behind **Kong Gateway** using **OAuth 2.0** and **Okta**-issued **JWT** tokens, integrating with existing identity provider flows without disrupting live traffic.
- Authored idempotent, production-safe migration scripts for zero-downtime schema changes, and cut technical debt **55%** by modernising legacy services onto async patterns.
- Reworked **Azure DevOps** CI/CD pipelines with staged gates and parallel jobs, shrinking deployment time **50%** and build cycles **33%**.

Projects

Expense Tracker – Event-Driven Microservices Application Aug 2023 – Dec 2023

- Built an expense tracker with **5+ microservices** in **Spring Boot**, using async **Kafka** messaging and **Kong API Gateway** for routing and auth.
- Containerised services with **Docker**, orchestrated via **Kubernetes**, and load-tested **1000+** simulated transactions end-to-end.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
