Sanskar Jain

Hyderabad, Telangana, India
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Backend engineer with 2+ years of experience building scalable, cloud-native applications and event-driven microservices. Proficient in Python with hands-on experience in AWS (EC2, S3, CloudWatch), Docker, and CI/CD pipelines. Skilled in server configuration, containerised deployments, and database management, consistently delivering robust production systems in Agile teams.

Skills

Languages: Python, C#, Java, TypeScript
Backend: REST APIs, Django, ASP.NET Core, Spring Boot, Microservices, Kafka, Redis
Cloud & DevOps: AWS (EC2, S3, CloudWatch, SNS, SQS, EKS, Lambda), Docker, Kubernetes, CI/CD, Terraform, Linux
Databases: PostgreSQL, MongoDB, MySQL
Tools: Git, Azure DevOps, Postman, Swagger, Splunk, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Deployed and managed **AWS EC2**-hosted backend services with **S3** storage integration and **CloudWatch** monitoring, ensuring high availability and real-time visibility into application and server health.
- Designed and shipped scalable **REST APIs** handling **200K+** weekly requests with structured error handling, input validation, and **Swagger**-documented contracts, ensuring stability across all consumers.
- Containerised microservices with **Docker** and orchestrated deployments with **Kubernetes**, improving environment consistency and streamlining releases across dev, staging, and production.
- Automated deployment pipelines using **CI/CD** with staged gates, parallel jobs, and automated test integration, reducing deployment time by **50%** and eliminating all manual release steps.
- Built **RulesRunner**, a server-side **SQS**-driven microservice that offloaded compliance checks from the client, cutting wait time by **83%** (3000ms → 500ms) and decoupling rules logic for independent scaling.
- Engineered a scalable backend for import/export of **30+** data types using async processing, **AWS S3** presigned URLs, and MongoDB, cutting data transfer time by **38%** and user-reported issues by **25%**.
- Improved API response time by **34%** via **Redis** caching, connection pooling, and targeted query optimisation on high-traffic endpoints.
- Reduced MTTR for production incidents by instrumenting services with structured logging and **Splunk** dashboards, surfacing error trends, latency spikes, and pipeline failures in real time.
- Implemented **AWS SNS** and Lambda pipelines with idempotent processing and retry/backoff handling, eliminating message loss under failure conditions for reliable async delivery.
- Managed automated **MongoDB** and **PostgreSQL** backup schedules and recovery procedures, ensuring data durability and continuity across production environments.
- Enforced server security controls including **SSL/TLS** certificate management, IAM-based access policies, and secrets handling via environment variables across all AWS-hosted services.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built a full-stack application with **5+** microservices; containerised all services with **Docker**, reducing local setup time by **60%** and ensuring consistent, reproducible deployments.
- Integrated **Kong API Gateway** for routing, load balancing, and authentication; used async **Kafka** communication and simulated **1000+** end-to-end transactions.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Developed a stock advisory platform in **Python** using LSTM models for 30-day price predictions; integrated Yahoo Finance API, Firebase, and deployed via **Streamlit**.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
