Sanskar Jain

Hyderabad, Telangana, India
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Backend-focused engineer with 2+ years building production systems in compliance-driven environments at Verisk Analytics (insurance analytics). Expert in **C#/.NET 8**, **CQRS**, and event-driven architectures; implemented event sourcing patterns with SNS/SQS pipelines, DLQ handling, and idempotent projections at scale. Proficient with **AWS** (EKS, Lambda, S3, SQS/SNS), **MongoDB**, Kafka, and AI-assisted development tools; delivered measurable latency and reliability improvements end-to-end.

Skills

Languages: C#, Java, Python, TypeScript
Backend: .NET 8, ASP.NET Core, CQRS, Event Sourcing, Event-Driven Architecture, Domain-Driven Design, Microservices, Kafka, REST APIs
Frontend: Angular (basic), TypeScript, HTML/CSS
Cloud & DevOps: AWS (EC2, ECS, EKS, Lambda, S3, SQS, SNS, RDS, DynamoDB, IAM, ElastiCache), Docker, Kubernetes, Terraform, CI/CD
Databases & Search: MongoDB, PostgreSQL, MySQL, OpenSearch/Elasticsearch, Redis, Query Optimisation, Indexing
Security: OAuth 2.0, JWT, Okta, Kong Gateway
AI & Tooling: GitHub Copilot, Azure DevOps, Swagger/OpenAPI, OpenTelemetry, Splunk, xUnit, NUnit, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Designed and delivered **RulesRunner**, a stateless compliance-check microservice using **CQRS** — commands dispatched via **SQS**, read-side projections rebuilt from event log — reducing client wait time from **3000ms to 500ms (83%)** while enabling horizontal scaling in a regulated environment.
- Implemented **event sourcing** patterns: append-only event store, idempotent event handlers, replay-safe projections, and **SNS**-based event publishing to distributed downstream consumers with full audit trail.
- Defined DDD-aligned service boundaries — commands, aggregates, domain events, and projections — in technical design documents; established DLQ handling and retry/backoff contracts across 6+ microservices.
- Engineered scalable backend for **Xactimate's** import/export of **30+ data types** using async processing, **S3 presigned URLs**, and **MongoDB**, reducing transfer time by **38%** and defect rate by **25%**.
- Built **ASP.NET Core** REST APIs serving **200K+ weekly requests** with structured error handling, input validation, **URL-based versioning**, and **Swagger/OpenAPI** documentation.
- Established **OAuth 2.0** on **AWS EKS** behind **Kong Gateway**, integrating **Okta JWT** tokens with Identity Server for secure cross-service authorization in a compliance-driven platform.
- Improved API response time by **34%** via **Redis/ElastiCache** caching, connection pooling, and query optimisation on hot-path endpoints; optimised **MongoDB** and **PostgreSQL** indexing by analysing slow-query access patterns.
- Leveraged **GitHub Copilot** daily for code generation, review, and test scaffolding; validated all AI-suggested output through unit tests, peer review, and integration testing before merging to production.
- Overhauled **Azure DevOps** pipelines with staged gates and parallel jobs, cutting deployment time by **50%**; authored idempotent migration scripts enabling zero-downtime releases.
- Migrated legacy services to **.NET 8** with modern async patterns, reducing technical debt by **55%** and improving runtime performance by **30%**.
- Instrumented services with **OpenTelemetry** and **Splunk**; wrote **xUnit/NUnit** unit and integration tests; participated in structured code reviews.

Projects

Expense Tracker – Microservices Application Aug 2023 – Dec 2023

- Built event-driven expense tracker using **Spring Boot** microservices with async **Kafka** messaging, **Kong API Gateway**, Docker, and Kubernetes; simulated **1000+ transactions** for load testing.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
