Sanskar Jain

Backend Engineer — Distributed Systems & AI-Augmented Development
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Backend engineer with 2+ years of experience building distributed systems, event-driven microservices, and cloud-native APIs at Verisk Analytics. Strong proficiency in C# and .NET with hands-on use of AI coding tools (GitHub Copilot, Cursor) integrated into daily engineering workflows. Proven track record of reducing latency, improving reliability, and shipping production systems in collaboration with globally distributed Agile teams.

Skills

Languages: C#, Java, Python, TypeScript
Backend: .NET 8, ASP.NET Core, Spring Boot, REST APIs, GraphQL, Microservices, Kafka, Redis
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, Terraform, CI/CD, Azure DevOps
Databases: MongoDB, PostgreSQL, MySQL
AI & Tools: GitHub Copilot, Cursor, Splunk, Swagger, Postman, Jira, Bitbucket

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Built **RulesRunner**, a distributed microservice using **SQS** that offloaded compliance checks from the client, reducing wait time from **3000ms to 500ms** (**83%**) through async processing and decoupled event-driven architecture.
- Cut technical debt by **55%** and improved runtime performance by **30%** by migrating legacy services to **.NET 8**, modernising dependency injection, async patterns, and C# SDK tooling.
- Integrated **GitHub Copilot** and **Cursor** into daily engineering workflows, accelerating feature delivery velocity and enabling AI-assisted code authoring, review, and iterative refinement on distributed system components.
- Engineered a scalable backend for **Xactimate's** import/export of **30+ data types** using async processing, AWS S3 presigned URLs, and MongoDB, reducing data transfer time by **38%** and user-reported issues by **25%**.
- Achieved reliable **200K+** weekly requests by building **ASP.NET Core** REST APIs with structured error handling, input validation, and **Swagger**-documented contracts, ensuring backend stability and clear ownership.
- Improved API response time by **34%** via **Redis**/ElastiCache caching, connection pooling, and targeted query optimisation on hot-path endpoints.
- Eliminated message loss under failure conditions by designing **AWS SNS**, Lambda, and S3 event-driven pipelines with idempotent processing and retry/backoff for reliable async delivery at scale.
- Slashed deployment time by **50%** by overhauling **Azure DevOps** CI/CD pipelines with staged gates, parallel jobs, and automated test integration, eliminating all manual release steps.
- Reduced MTTR by instrumenting services with structured logging and **Splunk** dashboards, surfacing error trends, latency spikes, and pipeline failures in real time; communicated findings to globally distributed stakeholders.
- Authored technical design docs and API contracts; presented architecture trade-offs and delivery decisions to cross-functional stakeholders across globally distributed teams in async-first Agile workflows.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built full-stack expense tracker using **Spring Boot** with **5+** microservices, async **Kafka** communication, **Docker**, and **Kong API Gateway**; simulated **1000+** end-to-end transactions.

Stock Recommendation and Prediction Apr 2022 – Jun 2022

- Developed predictive stock advisory platform using **Python** and **LSTM** models for 30-day price forecasting; applied time-series ML and predictive modelling techniques with Yahoo Finance API and Streamlit.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
