Sanskar Jain

Software Engineer | C# / .NET | ASP.NET MVC | Web API | Full-Stack Development
Hyderabad, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Backend-focused software engineer with 2+ years designing and architecting scalable **C#/.NET** applications, **ASP.NET Core Web APIs**, and distributed microservices at Verisk Analytics. Strong grounding in **Agile SDLC**, high-performance/high-availability system design, and security best practices (**OAuth 2.0**, JWT). Comfortable working across the full application stack — from **JavaScript/jQuery** front-end integrations to relational and **NoSQL** database design — with a passion for clean code and continuously learning new technologies.

Skills

Languages & Web: C#, Java, Python, JavaScript, jQuery, TypeScript, HTML/CSS, JSON, AJAX
Frameworks & Platforms: .NET 8, ASP.NET Core, ASP.NET MVC, Web API, REST APIs, Microservices, Kafka, Redis
Databases: MongoDB (NoSQL), PostgreSQL, MySQL, SQL Server, Indexing, Query Optimization, Database Design
Security: OAuth 2.0, JWT, Okta, Kong Gateway, Secure API Design
Architecture & Practices: System Design, High Availability, Agile/Scrum, CQRS, CI/CD, Code Reviews, Technical Documentation
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, Azure DevOps, Terraform

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II Hyderabad, India

- Designed and architected **RulesRunner**, a stateless **C#** microservice using **CQRS** and **SQS**, reducing client wait time from **3000ms to 500ms (83%)** while enabling horizontal scaling for high-availability workloads.
- Built **ASP.NET Core Web API** endpoints handling **200K+ weekly requests** with structured error handling, input validation, and **Swagger/OpenAPI** documentation, following clean-code and testable design principles.
- Engineered a scalable import/export backend for **Xactimate** supporting **30+ data types** using async **C#** pipelines, **MongoDB** (NoSQL), and **S3** presigned URLs, cutting transfer time by **38%** and issues by **25%**.
- Applied **security best practices** by establishing **OAuth 2.0** authentication on AWS EKS behind **Kong Gateway**, integrating **Okta JWT** tokens for secure, cross-service authorization.
- Optimised **database indexing and query performance** across **MongoDB** and **PostgreSQL**, and improved API response time by **34%** via **Redis** caching and connection pooling on high-throughput endpoints.
- Authored **production-safe migration scripts** and design documentation defining service boundaries and API contracts, enabling zero-downtime deployments and consistent architecture across teams.
- Reduced technical debt by **55%** and improved runtime performance by **30%** by migrating legacy services to **.NET 8** with modern async patterns, demonstrating continuous learning and adoption of new practices.
- Overhauled **Azure DevOps CI/CD** pipelines with staged gates and parallel jobs, cutting deployment time by **50%** and build cycles by **33%** within an **Agile** delivery model.
- Wrote unit/integration tests with **xUnit/NUnit** and participated in structured **code reviews** covering architecture, security, and edge cases, solving problems across the entire application stack.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023
C#, Spring Boot, JavaScript/jQuery, Kafka, Docker, Kubernetes, SQL/NoSQL

- Architected **5+ microservices** with async **Kafka** messaging and a **JavaScript/jQuery** UI layer consuming **REST/JSON** APIs, backed by **relational and NoSQL** data stores.
- Containerised services with **Docker** and orchestrated deployments via **Kubernetes**; integrated **Kong API Gateway** for routing/auth and simulated **1000+ transactions** for high-availability load testing.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services | Oct 2024

Education

B.Tech in Computer Engineering — Vishwakarma Institute of Technology, Pune (SPPU) 2024 | CGPA: 8.8
