Sanskar Jain

Java Backend Engineer — Microservices — Distributed Systems
Hyderabad, Telangana, India
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Java and Spring Boot backend engineer with 2+ years of experience building cloud-native microservices, event-driven architectures, and distributed systems at Verisk Analytics. Proficient in object-oriented design, message queues, RDBMS and NoSQL databases, and automated testing. Consistently delivered production systems in Agile/Scrum teams with measurable improvements in latency, reliability, and deployment velocity.

Skills

Languages: Java 8+, C#, Python, TypeScript
Backend: Spring Boot, Microservices, REST APIs, Kafka, RabbitMQ, Message Queues (SQS/SNS), Redis
Cloud & DevOps: GCP, AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, CI/CD, Terraform
Databases: PostgreSQL, MySQL, MongoDB, Redis
Testing & Tools: JUnit, Automated Testing, Swagger, Splunk, Azure DevOps, Jira, Agile/Scrum

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Architected **RulesRunner**, an event-driven **microservice** using **message queues (SQS)** that offloaded compliance checks from the client, reducing wait time from **3000ms to 500ms** (**83%** improvement) and enabling independent scaling.
- Engineered scalable **REST APIs** serving **200K+ weekly requests** with structured error handling, input validation, and **Swagger**-documented contracts in a multi-tiered distributed architecture.
- Reduced data transfer time by **38%** by designing an async backend for import/export of **30+ data types** using **S3**, **PostgreSQL**, and **MongoDB**, applying object-oriented design patterns for extensibility.
- Improved API response time by **34%** via **Redis** caching, connection pooling, and targeted **relational database** query optimisation on hot-path endpoints.
- Eliminated message loss by designing **SNS/SQS** and Lambda pipelines with idempotent processing, retry/backoff strategies, and dead-letter queues for reliable async delivery.
- Slashed deployment time by **50%** by overhauling CI/CD pipelines with staged gates, parallel jobs, and **automated test integration**, eliminating all manual release steps.
- Accelerated build and test cycle speed by **33%** through parallelised **automated testing**, build caching, and pipeline optimisation in an **Agile/Scrum** workflow, shipping **10+ features per quarter**.
- Cut technical debt by **55%** and improved runtime performance by **30%** through modernising dependency injection, async patterns, and applying **object-oriented design** principles.
- Reduced mean time to diagnose production incidents by instrumenting services with structured logging and **Splunk** dashboards, surfacing error trends and latency spikes in real time.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built a full-stack expense tracker using **Java/Spring Boot** with **5+ microservices** and async **Kafka** message queue communication, following **Agile iterations** and user stories.
- Containerised all services with **Docker** and wrote **automated functional tests** with **JUnit**; simulated **1000+** transactions end-to-end for performance validation.
- Integrated **Kong API Gateway** for routing, load balancing, and authentication across the **distributed multi-tiered** system.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
