Summary

Backend software engineer with 2+ years of full-lifecycle development experience in C# and Java, delivering testable, well-documented, and high-performance systems at Verisk Analytics. Proven in reducing technical debt, stewarding code quality through active code reviews, and contributing to architectural design, refactoring, and security-conscious API delivery across the full SDLC. Collaborative, cross-functional communicator with a track record of data-driven process improvement and reliable Agile delivery — from requirements analysis through CI/CD and production monitoring.

Skills

Languages: C#, Java, Python, TypeScript
Backend Development: .NET 8, ASP.NET Core, Spring Boot, REST APIs, Microservices, Kafka, Redis
SDLC & Quality: Test Automation, Code Reviews, Bug Triage, CI/CD, Azure DevOps, Security Principles
Cloud & Infrastructure: AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, Terraform
Databases & Tools: MongoDB, PostgreSQL, MySQL, Splunk, Swagger, Postman, Bitbucket, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Designed and developed **RulesRunner**, a C# backend microservice with full test-automation coverage for compliance logic, reducing client wait time by **83%** and decoupling rules execution for independent scaling.
- Reduced **technical debt by 55%** and improved runtime performance by **30%** by leading architectural migration of legacy services to **.NET 8**, refactoring dependency injection and async patterns with zero regressions.
- Stewarded **code quality and technical standards** through active code reviews, enforcing input validation, structured error handling, and security and privacy best practices across all API surfaces.
- Triaged and resolved production defects by instrumenting services with **Splunk** structured logging; surfaced error trends, latency spikes, and pipeline failures to ensure timely resolution and system reliability.
- Engineered a scalable **C# import/export backend** for 30+ data types using async processing, AWS S3 presigned URLs, and MongoDB, reducing data transfer time by **38%** and user-reported issues by **25%**.
- Collaborated cross-functionally with product managers, QA, and data engineers to gather requirements, document API contracts with **Swagger**, and deliver **ASP.NET Core** APIs handling **200K+** weekly requests.
- Contributed to **CI/CD pipeline** improvements with staged gates, parallel test jobs, and build caching, cutting deployment time by **50%** and accelerating the build-test cycle by **33%** for consistent quarterly delivery.
- Improved API response time by **34%** via **Redis**/ElastiCache caching, connection pooling, and targeted query optimisation; validated each change against performance benchmarks before code review submission.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built a Java **Spring Boot** application with **5+** microservices, async **Kafka** communication, and a test-automation suite validating **1000+** end-to-end transactions against functional specifications.
- Containerised all services with **Docker** and integrated **Kong API Gateway** for routing and authentication; documented architecture and integration flows to support team onboarding, reducing setup time by **60%**.

Stock Recommendation and Prediction Platform Apr 2022 – Jun 2022

- Developed a Python **LSTM**-based stock advisory app integrating Yahoo Finance API and Firebase; documented model design and data flow end-to-end and deployed via **Streamlit**.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 — CGPA: 8.8
