Sanskar Jain

Software Engineer — Distributed Systems & Cloud-Native Backend
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Software Engineer with 2+ years of experience designing and building distributed systems, cloud-native microservices, and high-throughput APIs at Verisk Analytics. Proficient in Java, Python, and C# with strong foundations in object-oriented design, data structures, algorithms, and Linux environments. Hands-on with Docker, Kubernetes, CI/CD pipelines, and Git in cross-functional Agile teams delivering reliable, scalable production systems.

Skills

Languages: Java, Python, C#, TypeScript, Shell Scripting
Core CS: Data Structures, Algorithms, Object-Oriented Design, Distributed Computing
Frameworks: .NET 8, ASP.NET Core, Spring Boot, REST APIs, GraphQL, Microservices, Kafka, Redis
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, Terraform, CI/CD, Jenkins, Git
Databases & OS: PostgreSQL, MySQL, MongoDB — Linux/Unix, Networking Fundamentals

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Designed and developed **distributed microservices** for **Xactimate**, a cloud-based SaaS platform, collaborating with cross-functional teams to ship **10+ features per quarter** in Agile sprints.
- Built **RulesRunner**, a distributed microservice using **SQS** that offloaded compliance checks from the client, reducing wait time from **3000ms to 500ms** (83%) through efficient algorithm design and async processing.
- Cut technical debt by **55%** and improved runtime performance by **30%** by migrating legacy services to **.NET 8**, applying object-oriented design patterns, dependency injection, and async methodologies.
- Slashed deployment time by **50%** by overhauling **CI/CD pipelines** in Azure DevOps with staged gates, parallel jobs, and automated test integration, comparable to **Jenkins**-based workflows.
- Engineered a scalable backend for import/export of **30+ data types** using async processing, **AWS S3**, and MongoDB on **Linux**-hosted containers, reducing transfer time by **38%** and issues by **25%**.
- Achieved **200K+ weekly requests** by building secure REST APIs with structured error handling, input validation, and **Swagger**-documented contracts, ensuring system reliability and clear API ownership.
- Improved API response time by **34%** via **Redis** caching, connection pooling, and targeted query optimisation on hot-path endpoints using data-structure-driven profiling.
- Eliminated message loss under failure conditions by designing **AWS SNS**, Lambda, and S3 event-driven pipelines with idempotent processing and retry/backoff for reliable distributed delivery.
- Containerised and orchestrated services using **Docker** and **Kubernetes** on AWS EKS, managing deployments, scaling policies, and health checks across **Linux** environments.
- Reduced mean time to diagnose production incidents by instrumenting services with structured logging and **Splunk** dashboards, applying analytical problem-solving to surface root causes in real time.
- Accelerated build and test cycle by **33%** through parallelised testing, build caching, and **Git**-based branching strategies, enabling consistent delivery velocity.
- Authored technical documentation for system designs, API contracts, and runbooks; mentored junior engineers on distributed computing patterns and coding best practices.

Projects

Expense Tracker – Distributed Microservices Application Aug 2023 – Dec 2023

- Built a full-stack application using **Spring Boot** (Java) with **5+ microservices**, **Kafka**, **Docker**, and **Kong API Gateway**; tested with **1000+** end-to-end transactions.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
