Sanskar Jain

AI/ML Engineer | Generative AI
Agentic Automation
Pune, Maharashtra, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

AI/ML Engineer with 2+ years of production experience building machine learning and generative AI solutions from data pipelines to deployment and monitoring. Delivered NLP and LLM systems using Python, PyTorch, TensorFlow, Scikit-learn, and Hugging Face Transformers, including fine-tuning, prompt engineering, and context orchestration. Built agentic automation workflows with LangChain, LangGraph, LangSmith, n8n, and API-first integrations to improve business throughput and user outcomes.

Key Skills

AI/ML & GenAI: PyTorch, TensorFlow, Scikit-learn, Hugging Face Transformers, NLP, BERT, GPT fine-tuning, Stable Diffusion, prompt tuning, RAG, evaluation
Agentic & Automation: LangChain, LangGraph, LangSmith, LangFuse, n8n, OpenAI APIs, prompt management, QA for AI assistants, conversational workflows
Data & MLOps: Feature engineering, model training, experiment tracking, model versioning, CI/CD, monitoring/drift detection, A/B testing, MLflow
Platforms & Integration: Python, REST APIs, FastAPI, Docker, Kubernetes, Azure ML, AWS SageMaker, Power Automate, Copilot Studio, SQL, MongoDB

Experience

Verisk Analytics Jan 2024 – Present
AI/ML Engineer (Backend + Applied AI) Hyderabad, India

- Designed and deployed 12+ ML/NLP services in production for document understanding and claims intelligence, improving prediction quality by 23% and reducing manual review effort by 35%.
- Fine-tuned BERT and GPT-family models with Hugging Face and PyTorch on domain corpora; improved intent/entity F1 by 18% and lowered hallucination/irrelevant outputs by 27% through prompt and context engineering.
- Built end-to-end AI data pipelines (ingestion, preprocessing, feature engineering, training, validation) processing 5M+ records/month, cutting model retraining lead time by 40%.
- Implemented MLOps standards with model versioning, CI/CD, canary rollout, and runtime monitoring (latency, accuracy, drift), increasing release reliability to 99.5% and reducing incident MTTR by 30%.

Selected Projects

Agentic Customer Operations Copilot Aug 2025 – Feb 2026
Python, LangChain, LangGraph, n8n, LangSmith, FastAPI

- Engineered a multi-agent workflow for ticket triage, knowledge retrieval, and response drafting with human-in-the-loop QA, reducing average handling time by 42% and raising first-response quality scores by 31%.
- Integrated CMS, CRM, and internal tools via REST APIs; implemented prompt library/versioning and automated eval harnesses for regression testing before release.

Voice AI Automation Suite Apr 2025 – Jul 2025
ElevenLabs, OpenAI, Power Automate, Azure

- Built voice-enabled agent workflows for appointment and follow-up automation using ElevenLabs + LLM orchestration, improving conversion rates by 19% across pilot campaigns.
- Deployed workflow analytics and guardrails for compliance, fallback handling, and prompt safety, enabling stable client-facing rollout in multi-team environments.

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 | 8.8 GPA
