Summary

Software engineer with 2+ years of experience translating requirements into production-ready solutions using C#, Java, and Python in Windows and Linux environments. Proven record of contributing to delivery pipelines, test automation, and CI/CD tooling, with hands-on AWS cloud experience and a strong foundation in software design and algorithms. Collaborative, self-motivated, and fast-learning engineer with a track record of data-driven process improvement and delivering across the full software development lifecycle.

Skills

Languages: C#, Java, Python, TypeScript, JavaScript
Frameworks & Backend: .NET 8, ASP.NET Core, Spring Boot, REST APIs, Microservices, Kafka, Redis
Cloud & Open Source: AWS (S3, SNS, SQS, EKS, ECS, Lambda), Docker, Kubernetes, Terraform
CI/CD & Test Automation: Azure DevOps, CI/CD Pipelines, Automated Testing, Build Optimisation
Databases & Tools: MongoDB, PostgreSQL, MySQL, Splunk, Swagger, Postman, Bitbucket, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Translated compliance requirements into **RulesRunner**, a C# microservice with automated unit tests covering edge-case logic, reducing client wait time by **83%** (3000ms to 500ms) and enabling independent scaling.
- Contributed to **delivery pipeline** overhaul on Azure DevOps with staged gates, parallel jobs, automated test integration, and security checks, reducing deployment time by **50%** and eliminating all manual release steps.
- Accelerated build and **test automation** cycle by **33%** through parallelised testing and build caching, providing data-driven recommendations that enabled the team to ship **10+** features per quarter.
- Identified and led **architectural refactoring** of legacy services to **.NET 8**, modernising dependency injection and async patterns, cutting technical debt by **55%** and runtime performance by **30%** with zero regressions.
- Designed **ASP.NET Core** REST APIs handling **200K+** weekly requests; applied software design principles and code review standards — structured error handling, input validation, and Swagger-documented contracts.
- Reduced data transfer time by **38%** by engineering a scalable import/export backend for **30+** data types using async processing, AWS S3, and MongoDB — translating complex requirements into a reliable open-source solution.
- Instrumented services with **Splunk** structured logging on Linux/containerised environments; surfaced latency and error trends to make **data-driven** recommendations that reduced mean diagnosis time across the team.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built a Java **Spring Boot** application with **5+** microservices, async **Kafka** communication, and automated integration tests validating **1000+** end-to-end transactions against technical specifications.
- Containerised all services using **Docker** (open-source Linux environment) and integrated **Kong API Gateway** for routing and authentication; reduced environment setup time by **60%**.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 — CGPA: 8.8
