Summary

Backend and platform engineer with 2+ years of experience building distributed systems, cloud-native infrastructure, and high-reliability production services at Verisk Analytics. Deep expertise in **Kubernetes**, **AWS**, event-driven architecture, and observability engineering using **OpenTelemetry** and **Splunk**. Proven track record of owning complex projects end-to-end, improving system reliability, and collaborating in globally distributed Agile teams.

Skills

Languages: Python, Golang, C#, Java
Distributed Systems: Microservices, Event-Driven Architecture, Kafka, SQS/SNS, CQRS, Async Processing, Idempotency
Kubernetes & Cloud: Kubernetes (EKS, ECS, Helm, Namespaces, RBAC), Docker, AWS (S3, Lambda, ElastiCache, SQS, SNS), Terraform, CI/CD
Observability: OpenTelemetry, Splunk, Prometheus, SLI/SLO Definition, Distributed Tracing, On-Call, Incident Response
CI/CD & Automation: Azure DevOps, Staged Pipelines, Parallel Jobs, Automated Testing, Infrastructure-as-Code
Databases: MongoDB, PostgreSQL, MySQL, Redis, Indexing, Query Optimization
Security: OAuth 2.0, JWT, Okta, Kong Gateway, API Versioning
Testing & Practices: xUnit, NUnit, Code Review, Version Control, Swagger/OpenAPI, Jira

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Co-designed **RulesRunner**, a stateless microservice using **CQRS** and **AWS SQS** that offloaded compliance checks asynchronously, reducing end-to-end latency from **3000ms to 500ms (83%)**; deployed via **Helm charts** on **EKS** with namespace isolation, RBAC policies, and resource quotas for multi-tenant safety.
- Architected **event-driven pipelines** with idempotent processing, retry/backoff strategies, DLQ handling, and **AWS Lambda** ensuring zero message loss under failure conditions across distributed consumers.
- Authored technical design documentation defining service boundaries, API contracts, and **SNS**-based event publishing patterns; estimated technical scope, identified delivery risks, and drove end-to-end execution across globally distributed teams.
- Engineered scalable import/export backend for **Xactimate** handling **30+ data types** with async processing, **S3 presigned URLs**, and **MongoDB**, reducing transfer time by **38%** and error rate by **25%**.
- Defined **SLIs/SLOs** and error budgets for production services; participated in **on-call rotations**, triaged alerts via **Prometheus** and **Splunk** dashboards, and used **OpenTelemetry** distributed tracing to significantly reduce MTTR.
- Established **OAuth 2.0** authentication on **AWS EKS** behind **Kong Gateway** and **Istio** service mesh, integrating **Okta JWT tokens** with Identity Server for policy-enforced, secure cross-service communication.
- Improved API response time by **34%** via **Redis/ElastiCache** caching, connection pooling, and query optimisation on hot-path endpoints serving **200K+ weekly requests**.
- Overhauled **Azure DevOps** CI/CD pipelines with staged gates, parallel jobs, and automated testing – slashing deployment time by **50%** and build cycles by **33%**.
- Optimised **database indexing strategies** on **MongoDB** and **PostgreSQL** to improve query performance, analysing slow queries and access patterns for high-scale production workloads.
- Developed **Python** automation scripts for infrastructure provisioning, data pipeline validation, and operational tooling; built a **Golang**-based internal CLI for service health checks and deployment orchestration across environments.
- Participated in structured **code reviews** covering architecture, edge cases, and production readiness; maintained high engineering standards across distributed team.

Projects

Expense Tracker – Cloud-Native Microservices Platform Aug 2023 – Dec 2023

- Built a distributed expense tracker using **Spring Boot** with **5+ microservices**, async **Kafka** communication, and **Kong API Gateway** for routing and authentication.
- Containerised all services with **Docker** and orchestrated deployments using **Kubernetes**; simulated **1000+ concurrent transactions** end-to-end for reliability and load testing.
- Implemented service-level health checks and structured logging to replicate production observability practices.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

B.Tech in Computer Engineering – Vishwakarma Institute of Technology, Pune 2024 — CGPA: 8.8
