Sanskar Jain

Backend Engineer — Java & Spring Boot — Microservices
9021620156 — sanskarjain0901@gmail.com — LinkedIn

Summary

Backend engineer with 2+ years of experience building cloud-native APIs, event-driven microservices, and distributed systems at Verisk Analytics. Strong hands-on expertise in Java, Spring Boot, C#/.NET, multithreaded processing, and cloud-native architecture on AWS. Proven ability to design scalable backend services, work with SQL and NoSQL databases, and ship production features end-to-end in Agile teams. Passionate about clean OOP design, performance optimisation, and delivering reliable backend services.

Skills

Languages: Java 8+, C#, Python, TypeScript
Backend & Frameworks: Spring Boot, Spring Framework, ASP.NET Core, .NET 8, REST APIs, Microservices, Multithreading
Cloud & DevOps: AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, Terraform, CI/CD Pipelines, Git
Databases & Messaging: PostgreSQL, MySQL, MongoDB, Apache Kafka, RabbitMQ, Redis, ElastiCache
Tools: Kong API Gateway, Swagger, Postman, Splunk, Azure DevOps, Jira, Bitbucket

Experience

Verisk Analytics Jan 2024 – Present
Software Engineer II, Hyderabad, India

- Built **RulesRunner**, a multithreaded microservice consuming messages from **AWS SQS** that offloaded compliance checks from the client, reducing response latency from **3000ms to 500ms** (83% improvement) and enabling independent horizontal scaling.
- Designed and delivered production **REST APIs** handling **200K+ weekly requests** with structured error handling, input validation, and **Swagger**-documented contracts, ensuring high availability and API stability.
- Improved API response time by **34%** via **Redis**/ElastiCache caching layers, connection pooling, and targeted query optimisation on high-traffic endpoints.
- Engineered a scalable backend for import/export of **30+ data types** using async processing, **AWS S3** presigned URLs, and **MongoDB**, reducing data transfer time by **38%** and user-reported issues by **25%**.
- Designed event-driven pipelines with **AWS SNS**, Lambda, and S3 featuring idempotent processing, retry/backoff strategies, and dead-letter queues for reliable asynchronous message delivery.
- Cut technical debt by **55%** and improved runtime performance by **30%** migrating legacy services to **.NET 8** with modern dependency injection, async patterns, and multithreaded execution.
- Slashed deployment time by **50%** by overhauling CI/CD pipelines with staged gates, parallel jobs, **Docker** containerisation, and automated test integration.
- Reduced mean time to diagnose incidents by instrumenting services with structured logging and **Splunk** dashboards for real-time error trend and latency monitoring.

Projects

Expense Tracker – Distributed Microservices Application Aug 2023 – Dec 2023

- Architected a cloud-native expense tracker using **Java/Spring Boot** with **5+ microservices** and async **Kafka**-based inter-service communication with multithreaded consumers.
- Integrated **Kong API Gateway** for routing, load balancing, rate limiting, and service discovery; containerised all services with **Docker** and **Kubernetes**.
- Implemented **PostgreSQL**-backed persistence with connection pooling and optimised queries for concurrent read/write workloads across microservices.
- Conducted load testing simulating **1000+** peak transactions end-to-end to validate throughput and identify performance bottlenecks pre-deployment.

Certifications

AWS Certified Cloud Practitioner Amazon Web Services — Oct 2024

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
