# Sanskar Jain

Software Engineer — Secure & Scalable Software Solutions
9021620156 — sanskarjain0901@gmail.com — LinkedIn

## Summary

Software Engineer with 2+ years of experience in programming, analysis, design, development, and delivery of secure, scalable software solutions at Verisk Analytics. Proficient in C#, .NET, Java, and Python with strong knowledge of software engineering concepts, methodologies, and quality assurance processes. Detail-oriented and proactive, with proven ability to meet scheduled deadlines, manage production incidents, and collaborate effectively in distributed, cross-functional teams.

## Skills

**Languages:** C#, Java, Python, TypeScript, JavaScript
**Frameworks & Tools:** .NET 8, ASP.NET Core, Spring Boot, REST APIs, GraphQL, Microservices, Kafka, Redis
**Cloud & DevOps:** AWS (S3, SNS, SQS, EKS, Lambda), Docker, Kubernetes, Terraform, CI/CD Pipelines
**Databases:** PostgreSQL, MySQL, MongoDB
**Practices & Tools:** Git, Azure DevOps, Jira, Agile/Scrum, Swagger, Splunk, Postman, Bitbucket

## Experience

**Verisk Analytics** Jan 2024 – Present
**Software Engineer II, Hyderabad, India**

- Designed, developed, and delivered scalable software solutions for **Xactimate**, collaborating with product management, QA, and DevOps to meet scheduled due dates, consistently shipping **10+ features per quarter**.
- Built **RulesRunner**, a secure microservice using **SQS** that offloaded compliance checks from the client, reducing wait time from **3000ms to 500ms** (83%) through analysis of input-output flow and cost-time trade-offs.
- Cut technical debt by **55%** and improved runtime performance by **30%** by researching and evaluating alternative technical solutions, then migrating legacy services to **.NET 8** with modernised design patterns.
- Slashed deployment time by **50%** by overhauling **CI/CD pipelines** in Azure DevOps with staged gates, parallel jobs, and automated test integration, enhancing quality assurance processes.
- Engineered a highly available backend for import/export of **30+ data types** using async processing, AWS S3, and MongoDB, reducing transfer time by **38%** and user-reported issues by **25%**.
- Achieved **200K+ weekly requests** by building secure **ASP.NET Core** REST APIs with structured error handling, input validation, and **Swagger**-documented contracts per software development best practices.
- Improved API response time by **34%** via **Redis** caching, connection pooling, and targeted query optimisation on high-traffic endpoints, meeting performance and scalability requirements.
- Performed production incident management by triaging critical issues across microservices, applying root-cause analysis, and deploying hotfixes via **CI/CD** with zero downtime under tight SLAs.
- Reduced mean time to diagnose incidents by instrumenting services with structured logging and **Splunk** dashboards, supporting collection and reporting of software metrics in real time.
- Documented software programs, API contracts, and system designs per team standards; assisted senior engineers in maintaining and improving documentation templates across projects.
- Eliminated message loss under failure conditions by designing **AWS SNS**, Lambda, and S3 pipelines with idempotent processing and retry/backoff handling, ensuring reliable async delivery.
- Contributed ideas to enhance engineering standards and improve process efficiency, including proposing build caching and parallelised testing that accelerated the build cycle by **33%**.

## Projects

**Expense Tracker – Full-Stack Microservices Application** Aug 2023 – Dec 2023

- Programmed a full-stack application using **Spring Boot** with **5+ microservices**, **Kafka**, **Docker**, and **Kong API Gateway**; tested with **1000+** end-to-end transactions.

## Certifications

**AWS Certified Cloud Practitioner** Amazon Web Services — Oct 2024

## Education

**Bachelor of Technology in Computer Engineering**
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024
CGPA: 8.8
