Sanskar Jain

Java Backend Engineer | Spring Boot Microservices | Cloud-Native Services
Pune, Maharashtra, India | 9021620156 | sanskarjain0901@gmail.com | LinkedIn

Summary

Backend Engineer with 2+ years of experience developing and maintaining Java microservices using Spring Boot in cloud-based environments. Delivered scalable REST APIs, production support fixes, and reliable backend features in collaboration with product managers, QA, and senior engineers. Hands-on with Docker, CI/CD workflows, Git-based delivery, and cloud services across AWS and GCP. Strong problem solver with a track record of improving service reliability, deployment speed, and developer efficiency.

Key Skills

Languages: Java, Python, C#, TypeScript, SQL
Backend: Spring Boot, Java microservices, REST APIs, distributed systems, asynchronous processing
Cloud: AWS (S3, Lambda), GCP (Cloud Storage, Cloud Functions, BigQuery), cloud-native application development
DevOps: Docker, CI/CD pipelines, Git, Azure DevOps, Bitbucket, Swagger, Postman
Data: MongoDB, PostgreSQL, MySQL, Kafka
Ways of Working: Agile delivery, troubleshooting, production support, cross-functional collaboration, code reviews

Experience

Verisk Analytics Jan 2024 – Present
Backend Engineer Hyderabad, India

- Developed and maintained Java Spring Boot microservices and REST APIs for import/export workflows across 30+ data entities, improving data processing time by 40% and reducing user-reported issues by 25%.
- Designed scalable, reliable backend features with senior engineers using asynchronous patterns, cloud storage integrations, and event-driven processing, increasing service responsiveness by 35% under high-volume workloads.
- Troubleshot production issues, supported existing services, and partnered with QA and product managers to deliver 10+ features per quarter with predictable quality and faster release cycles.
- Improved engineering workflows by containerizing services with Docker and optimizing CI/CD pipelines, cutting deployment time by 50% and strengthening release consistency.
- Built and supported cloud-native APIs handling 200K+ weekly requests with Swagger-based documentation and automated testing, improving service reliability and easing QA validation.
- Contributed to event-driven backend integrations using AWS services including S3 and Lambda, helping improve system scalability and reducing manual operational effort.

Projects

Expense Tracker Microservices Platform Aug 2023 – Dec 2023
Spring Boot, Kafka, Docker, PostgreSQL

- Built a microservices-based expense management platform with 5+ Spring Boot services, Kafka-based asynchronous communication, and Dockerized local deployment for consistent developer environments.
- Implemented API routing, service-to-service communication, and persistence workflows that supported 1,000+ simulated transactions while reinforcing core microservices and troubleshooting skills.

Stock Recommendation and Prediction Apr 2022 – Jun 2022
Python, LSTM, Firebase, Streamlit

- Developed a stock advisory platform that generated 30-day predictions using LSTM models and integrated external market data APIs for analysis workflows.
- Built an end-to-end application flow with Firebase-backed data handling and Streamlit-based delivery, strengthening experience in backend integration and rapid feature development.

Education

Bachelor of Technology in Computer Engineering
Vishwakarma Institute of Technology, Pune (S.P.P.U) 2024 | CGPA: 8.8
