Sanskar Jain

Associate Software Engineer — SaaS Backend Development
Pune, Maharashtra, India
9021620156 — sanskarjain0901@gmail.com — linkedin.com/in/sanskar-jain0901/

Summary

Software Engineer with 2+ years of experience building scalable SaaS-oriented backend systems, APIs, and automation workflows. Delivered cloud-native services, CI/CD improvements, and high-volume integrations at Verisk Analytics using C#, .NET, Java, and AWS. Strong in Agile delivery, testing, bug triage, and engineering best practices for scalability, performance, availability, and operational efficiency.

Key Skills

SaaS & Backend: SaaS application development, REST APIs, microservices, ASP.NET Core, .NET 8, Spring Boot, backend automation
Engineering Practices: Scalability, optimization, performance tuning, availability, automation, virtualization, Agile, testing, bug fixing
DevOps & Cloud: AWS (S3, SNS, Lambda), Azure DevOps, CI/CD, Docker, Kubernetes, Terraform
Languages & Data: C#, Java, Python, TypeScript, MongoDB, PostgreSQL, MySQL
Tools: Jira, Bitbucket, Swagger, Postman, Splunk

Experience

Verisk Analytics Jan 2024 – Present
Backend Engineer, Hyderabad, India

- Engineered backend workflows for import/export of 30+ data types using asynchronous processing, AWS S3 presigned URLs, and MongoDB, reducing transfer time by 40% and user-reported issues by 25%.
- Designed and delivered ASP.NET Core and REST API services supporting 200K+ weekly requests, improving response time by 35% while strengthening reliability, testing, and API documentation with Swagger.
- Led migration of legacy services to .NET 8 and improved build, test, and deployment pipelines in Azure DevOps, reducing technical debt by 60%, improving runtime performance by 30%, and cutting deployment time by 50%.
- Worked in Agile teams to deliver 10+ features per quarter, troubleshoot production issues, and implement event-driven automation using AWS SNS, Lambda, and S3 for more scalable and resilient systems.
- Collaborated with QA and peer engineers on defect triage, validation, and release readiness, improving delivery quality through stronger testing coverage, clearer API contracts, and faster issue resolution.

Projects

Expense Tracker – Full-Stack Microservices Application Aug 2023 – Dec 2023

- Built a full-stack expense tracking system using Spring Boot with 5+ microservices handling 1000+ simulated transactions and asynchronous communication through Kafka.
- Containerized services with Docker and integrated Kong API Gateway for routing, authentication, and easier local setup, reducing environment setup time by 60%.

Workflow Automation Utility 2023

- Developed a lightweight backend automation utility to streamline task routing and operational follow-ups, improving repeatable execution and reducing manual coordination overhead.
- Added structured logging and reusable service components to support debugging, maintainability, and faster iteration during testing.

Education

Bachelor of Technology in Computer Engineering, Vishwakarma Institute of Technology, Pune (S.P.P.U)
2024 — CGPA: 8.8
